APHA Inspectors at work

*The certification of plant stocks is essential for the supply of healthy plants and vitally important to fruit growers. The plants offered in this catalogue are grown under the rules of the new EU Fruit Plant Certification Scheme (FPCS). The EU scheme is administered in the UK by the NSA and run by the Animal and Plant Health Agency (APHA) who carry out extensive and independent inspections of all entered stocks.*

## The Principles of Certification

- The parent material is derived from virus indexed pedigree stocks
- Every mother plant is inspected twice during the growing season by trained inspectors
- No disease masking pesticides are allowed (especially relevant to Blackspot, Crown Rot, Red Core and Raspberry Root Rot)
- The site must meet rotational and isolation requirements
- Any suspect plants are sent to the laboratory for further testing
- There are published tolerances for any non-quarantine pests and diseases which must not be exceeded

## Certification Grades FPCS - Certified Stock

Virus Tested Pedigree Mother Plants are produced by the Nuclear Stock Association (NSA) at East Malling by testing for all important viruses, pests and diseases using a full range of PCR and graft based tests. This Virus Indexed pre basic material is then used by commercial propagators to produce Basic (Grades 1 to 5) and Certified Plants.

## Plant Passport

When the stringent requirements of FPCS are not met, Rubus and Strawberries are inspected once only by APHA against a much reduced set of criteria in order to meet the EU Plant Passport standard (CAC).

## FPCS Charges

Strawberry FPCS Certification: £1.90/1000 plants

Raspberry FPCS Certification: £5.20/1000 canes

## FPCS - Approved Health

When a variety is first released and before pedigree material is available from the NSA we offer stocks that have been entered and inspected at the Approved Health Grade. This grade is part of the FPCS and uses the same criteria as the Certified Grade with regard to the health of the stocks but offers no safeguard with regards to trueness to type.

Kirsty McLeary at the NSA's facility at East Malling

For full details of the FPCS scheme see:  
[www.gov.uk/guidance/fruit-propagation-certification-scheme](https://www.gov.uk/guidance/fruit-propagation-certification-scheme)

For full details of the EU Plant Passport scheme see:  
<https://www.gov.uk/guidance/issuing-plant-passports-to-trade-plants-in-the-eu>

# strawberries | YOUR CHOICE OF PLANTS

Propagation field

*This guide provides the key points for each type of plant, summarising the propagation method and application recommended.*

## Soil Grown - Bare Root Plants

Sold as fresh dug plants until December and then as frozen/frigo plants ex cold store January - June, these plants will carry a cold store charge of £6.50 per thousand. Plants shipped after 30th June are supplied at the customers own risk.

### A+ Plants

Graded by crown size these plants make up c.25-30% of the plant crop and, under favourable establishment conditions, give a commercial yield within 50-60 days of planting. Recommended for planting in soil from February to June.

### A Grade Plants

Graded by crown diameter and representing the next 50% of the runner crop. A grade plants are ideal for planting in the soil and provide a low risk, low cost option of establishing a crop for a 2 or 3 year cropping cycle. These plants perform best when de-blossomed after planting.

### A- Grade Plants

The smallest 20% of the runner crop. Ideal for use as a potted plant for subsequent sale.

## Waiting Bed Plants

The preferred option for maximising '50-60 day' fruit yields in both substrate and soil based growing systems. These plants are produced in a 'Waiting Bed' (WB), grown at a controlled density, and are runner cut in order to maximise crown size, truss numbers and flower counts. WB plants are ideal for programmed cropping by specialist growers. These plants must be established under optimum conditions for rapid root development provided by short cycle, sprinkle irrigation in order to meet their full cropping potential.

*We offer Waiting Bed plants in 2 forms:*

### Fresh Waiting Bed (FWB)

Fresh Waiting Bed (FWB): grown from summer dug fresh plants and offered as 'heavies' for planting from January to March and 'mediums' and 'lights' for planting from April to June.

### Double Cold-stored Waiting Beds (DCWB)

Double Cold-stored Waiting Beds (DCWB) are grown from an early planted A- frigo plant in order to produce the heaviest possible waiting bed with the highest yield potential in the year of planting.

# YOUR CHOICE OF PLANTS | strawberries

## Substrate Grown Plants

### Misted Tips

Grown to order for sale late July/early August, tips are easy to establish under light sprinkler irrigation, develop quickly and initiate high quality flower trusses with the potential to deliver a full crop of Class 1 fruit next summer.

### Tray Plants

**Fresh Tray Plants (FTP):** large single crowned plants grown from fresh tips, struck in July. Suitable for long term storage.

**Double Cold-stored Tray Plants (DCTP)** also termed Frigo Waiting Beds: grown from cold-stored, small plants, planted into trays in March/April these produce multi-crowned plants with high flower counts most suited to early planting to maximise yield.

Grown to order in a 50:50 mix peat and coir. Tray plants maximise the truss and flower number in each plant allowing growers to plan their planting and cropping cycles to maximum effect.

Available ex cold-store January - late June.

Misted Tip Plants

Malling™ Centenary

## Malling™ Centenary EU 40671

*Bred by the East Malling Strawberry Breeding Club at NIAB-EMR and released in 2013, Malling™ Centenary has already established itself as the most widely grown and pre-eminent June bearing variety in the UK. A combination of superb fruit quality, excellent flavour, 98% Class I yields and phenomenal picking speeds has underpinned this variety's success.*

- Large, regular shaped berries (62% > 35mm), a Class I percentage approaching 100 and excellent presentation effectively halve the picking costs of Malling™ Centenary compared to standard varieties
- The exceptional fruit quality is the result of the bright high gloss of the berries, the attractive regular shape, the sweet juicy flavour and the excellent skin and flesh firmness
- An early season variety with a 50% pick date some 5 days ahead of Sonata and with a more condensed picking season than Elsanta
- Class I yields are less than Sonata but Malling™ Centenary yielded 6.9kg/m, in the Proecentrum Hoogstraten Glasshouse Trial, comparable to the highest yielding varieties in that trial
- Greater understanding of the physiology of the variety has enabled propagation to improve the productivity of both Waiting Bed and Tray Plants
- Malling™ Centenary has limited resistance to soil born pathogens and a similar susceptibility to Crown Rot as Elsanta. Careful management of both water and fungicides when growing in substrate is essential
- The variety performs well in traditional, open field production and maintains its exceptional quality and enhanced picking speeds

COMPARISON OF PICKING RATES AND COSTS

Kraege's Waiting Bed Production

## Fresh Struck Waiting Beds (FWB) sourced KRAEGE

Kraege Beerenpflanzen, located near the north German town of Munster, have an enviable reputation for the health and productivity of their plants and produce Fresh Struck Waiting Beds exclusively for R.W. Walpole Ltd. Kraege's have consistently delivered well graded and reliable plants of Malling™ Centenary over the last three seasons and have established a loyal following amongst our most discerning customers.

## Double Cold-stored Waiting Beds (DCWB)

Designed to provide a large Waiting Bed with an increased number of inflorescences per plant to maximise the 60-day yield.

Using our own FPCS Certified cold-stored plants planted late April - early May, we are able to produce a strong, multi-crowned and well rooted plant. These plants carry significantly more flower trusses than fresh struck plants and should be planted early in the season to maximize their potential. Trialled in coir at a density of 8 plants per metre run and planted at the end of April, our Double Cold-Stored Waiting Beds produced 584gms Class I fruit per plant (22000 kg/ha) over a 43 day picking period. At an increased density of 10 plants/metre run gave a Class I yield of 5.25kg metres.

## Tray Plants

### Double Cold-stored Tray Plants (DCTP)

Using our own FPCS Certified cold-stored plants, planted in early May, we are able to produce a strong multi-crowned Tray Plant with a high flower count and a high yield. These plants are most suited to early planting in order to achieve their maximum potential.

# strawberries | NEW FOR 2018

Malling™ Allure

## Malling™ Allure EU PVR App. 2017/3250

*An exciting new variety from NIAB—EMR to compliment the highly successful Malling™ Centenary by matching its fruit quality but with a 14 day later season.*

- This variety produces an exceptionally high percentage of large berries (92% > 35mm) with a high proportion of Class I (91%EMSBC grower trials) and has a good yield potential
- Superb fruit quality matches the very high standards set by Malling™ Centenary and is much superior to Elsanta and Sonata. The berries are lighter in colour than Elsanta, firm, with high Brix and excellent flavour
- Cropping with the same season as Florence, but somewhat more condensed, Malling™ Allure has a 50% pick date 14 days later than Malling™ Centenary
- Malling™ Allure is a robust, vigorous plant with an upright habit with some resistance to Mildew but moderately susceptible to Crown Rot and Verticillium Wilt
- Already listed by some major retailers

Malling™ Allure

Malling™ Allure looks destined to play an important role on many units by reducing the grower's dependency on Malling™ Centenary and thus extending the supply period for top quality, low cost fruit, and reducing the financial risk of short term over supply during Malling™ Centenary's production peak.

Certified Stock.

Trial quantities available as Mini-tray Plants: £500 per/1000

Vibrant

**Vibrant** EU37422

*Bred at EMR, Vibrant is a high yielding, high quality early variety with an excellent flavour that is providing a very profitable start to many growers' season.*

- The beautifully shaped, uniform conic berries, medium to large in size, are a glossy brilliant red colour and are carried on strongly erect, long flowering peduncles
- Vibrant produces a high 60 day yield over an extended season by producing a large number of flowering trusses in succession, each with only 4 or 5 flowers, thus maintaining berry size
- In the Hoogstraten trial 72% of Vibrant berries exceeded 35mm compared to 56% for Elsanta
- Maincrop yields normally exceed 1kg per plant
- Picking speeds are exceptional due to both the size and presentation of the berries
- Genuinely early variety with a 50% pick date at least 7 days ahead of Elsanta
- The plants are moderately vigorous with good resistance to Mildew and Crown Rot but are susceptible to Verticillium Wilt
- Forced crops will give a second flush of up to 400 grams of good quality fruit from July onwards

Sweetheart

## Christine

- Vigorous early variety with a similar season to Malling™ Centenary
- The orange-red berries are firm with an excellent skin strength and are resistant to bruising. Flavour is good
- Christine is the only early variety with really good resistance to Verticillium Wilt and will give three full crops when grown as a traditional matted row. The variety performs well under fleece
- Recommended for PYO production

**Certified Stock: £180 per/1000**

## Honeoye

- Established early variety with the same season as Christine
- The berries have a tendency to darken and need frequent picking
- Susceptible to Verticillium Wilt

**Certified Stock: £165 per/1000**

## Korona

- Recommended for the PYO growers in response to the variety's combination of flavour, season and disease resistance

**Approved Health: £165 per/1000**

## Malling™ Centenary (see page 4)

### Sweetheart EU 34842

- Bred at EMR this early season selection can be very successfully grown under a traditional, low cost, production system
- The large, very attractive, bright and glossy conic berries have superb visual appeal and an excellent flavour
- Yields in excess of 6 tons/acre, have been achieved commercially on our own farm. 60 day yields are modest
- Sweetheart has reasonable resistance to both Powdery Mildew and Verticillium Wilt

**Certified Stock: £196 per/1000**

## Marshmello

- EMR bred early season variety producing strong, vigorous, large crowned plants with excellent disease resistance
- Selected in response to its superb flavour this variety has become a favourite of the PYO industry and has been exclusively and successfully marketed to the amateur sector by Marshalls
- Now available for retail sales

**Certified Stock: £196 per/1000**

Christine

Sonata

## Elsanta

*Still an important variety some 34 years after its release by the Dutch breeder.*

- Good fruit quality and an excellent shelf-life underpinned the success of this variety
- The medium to large, firm orange-red berries are very attractive
- Susceptibility to fruit splitting and a tendency to produce misshapen fruit leading to a low percentage Class I limit the variety's profitability
- Susceptible to Two Spotted Mite, Powdery Mildew and Verticillium Wilt
- Performs well as a Waiting Bed and Tray Plant
- A+ plants graded at a minimum crown diameter of 15mm

## Sonata EU 14768

*Released by Fresh Forward in Holland and the most widely grown variety in Northern Europe until the introduction of Malling™ Centenary.*

- A high yielding selection with a high percentage of Class I attractive, uniform and conical berries that are bright with a high gloss
- Both the flavour and texture are superior to that of Elsanta
- Sonata is less susceptible than Elsanta to splitting but is more sensitive to bruising, especially in hot weather
- Five days later than Elsanta. Very productive as a Waiting Bed and Tray Plant
- A+ plants graded at a minimum crown diameter of 14mm

Elegance

## Eros EU 1672

- Regular attractive conical berries with a glossy skin and very good flavour
- Resistant to Red Core and tolerant to Verticillium Wilt
- Still popular with PYO Growers

Approved Health: £196 per/1000

## Hapil

- A large vigorous plant producing heavy crops of bright, glossy, somewhat soft, mid-season berries
- The size, flavour and appearance of the fruit appeal to the PYO customer
- Susceptible to Verticillium Wilt

Certified Stock: £180 per/1000

## Cambridge Favourite

- Bred in 1938 Cambridge Favourite is an exceptional processing variety
- Excellent disease resistance and a vigorous free running habit makes this an easily grown variety that crops heavily and reliably under a wide range of conditions

Certified Stock: £165 per/1000

## Pegasus

- Attractive, well presented and pleasantly flavoured berries but less firm and with softer flesh than modern berries
- Good all round disease resistance and usefully tolerant to Verticillium Wilt
- Still useful as a general purpose PYO variety

Certified Stock: £175 per/1000

## Redgauntlet

- 'Heritage' variety
- A high yielding variety producing a second crop of fruit in September
- Red Core resistant

Certified Stock: £175 per/1000

## Lucy EU 32752

- EMR bred and ideal for low cost, unprotected production systems
- 5 days later than Sonata, Lucy produces large, attractive, mid-red glossy berries, 80% of which exceed 35mm
- The berries hold exceptionally well on the plant and withstand heavy rain
- Lucy has good resistance to Crown Rot but is susceptible to both Verticillium Wilt and Mildew

Certified Stock: £191 per/1000

Fenella

### Elegance EU 32070

- Elegant, bright and beautifully glossy berries combined with an exceptional shelf-life are the features of this increasingly popular variety
- Elegance has a sweet strawberry flavour with a pleasant juicy texture when soil grown. Nitrogen levels need to be reduced to maintain the flavour in substrate
- The berries are well displayed with a high percentage of Class I, they have little susceptibility to finger bruising and have a genuinely exceptional shelf-life
- 60-day and maincrop yields are excellent and Elegance was the top performing variety in PC Fruit's Tongeren trials for four successive years
- Susceptible to Mildew. Some tolerance to Verticillium Wilt and Crown Rot

### Fenella EU 32669

- Bred by EMR Fenella is a high yielding, high quality, late season variety with excellent disease and weather resistance
- The berries are large, attractive, glossy with a waxy skin, orange-red in colour firm and with an excellent and distinctive sweet flavour
- Fenella produces a lush, vigorous plant with a compact upright habit with the fruit well displayed on long trusses
- Fenella has good resistance to Crown Rot and Verticillium Wilt and performed well in both extremely wet and hot seasons
- Rain tolerance allows for the reliable production of good quality, low cost, unprotected fruit over a wide geographical range

# strawberries | Late Season | Listed in order of cropping

Symphony (Image courtesy of Claire Higgins)

## Cupid EU 37423

- Late season selection cropping at the same time as Florence
- The only variety available with resistance to Verticillium Wilt, Crown Rot, Black Spot and Powdery Mildew
- Attractive, uniform, conic berries with good skin strength and shelf-life

Certified Stock: £196 per/1000

Cupid

## Symphony EU 1713

- Bred by JHI in Scotland this is a well established late season variety
- The berries are bright, regular and glossy with good flesh and skin strength and a pleasant, somewhat acidic, flavour
- Symphony has the potential for very high yields
- The variety has field resistance to Red Core and is suited to low cost, outdoor production

Certified Stock : £191 per/1000

## NEW RELEASE

### Malling™ Allure (see page 6)

## Florence EU 7386

- This late season EMR bred variety is one of the most widely grown in Europe with over 15 million plants sold annually
- Florence has a prolonged picking season

- The berries are consistently large, sweet and with a particularly good flavour but darken when overripe
- Resistant to Crown Rot and most leaf diseases and with tolerance to Verticillium Wilt

Certified Stock: £196 per/1000

A+ Grade: £296 per/1000

## Judibell EU 21937

- Incorporating the trait of 'extended dormancy' Judibell remains dormant until mid-May and this contributes to a 50% pick date some 20 days later than Florence
- The mid-red berries have an acceptable flavour but are somewhat soft and with poor shelf-life

Certified Stock: £196 per/1000

Malwina

### Malwina EU 24376

*Bred in Germany in 1998 by Peter Stoppel from a Sophie cross, Malwina has set a new standard for late season varieties in the direct marketing sector and is considered to be one of the best flavoured varieties currently available.*

- This very late season variety has proved extremely useful to PYO growers. With a start date and 50% pick date some 12 days later than Florence, Malwina has profitably extended the season wherever it has been planted
- The variety is very vigorous and the short fruiting pedicels tend to hide the fruit within the foliage. Malwina is self-fertile but yields are some 15% less than Elsanta
- The dark red, glossy berries are firm, red fleshed with a lovely sweet aroma, exceptionally high Brix readings, and with an excellent flavour
- The berries are large, with over 85% of the crop exceeding 35mm
- The plant is very vigorous. Any application of nitrogen has to be carefully managed to avoid excessive vegetative growth. Where possible restrict the variety to a narrow row
- Malwina is resistant to Mildew, tolerant to Verticillium Wilt and Red Core but is susceptible to Crown Rot. Blossum Weevil and Thrip control should be aligned to the late flowering period. The variety withstands heavy rain
- Please note that approximately 3% of fruits exhibit Phyllody, whereby small leaves emerge from the fruit. This defect is stable and does not spread

NB: Look out for Blossum Weevil

Malwina

Approved Health: £210 per/1000 A+ Grade: £304 per/1000

# strawberries | everbearers

Malling™ Champion

## NEW RELEASE

**Malling™ Champion** EU PVR App. No: 2017/3249

*The latest everbearer to be released from the East Malling Strawberry Breeding Club's programme Malling™ Champion is a high yielding, large fruited, high quality selection with superior disease resistance.*

- Early season everbearer with a peak harvest in July and steady production throughout August
- High yielding variety, frequently exceeding 1000gms/plant in trials
- Attractive, conic shaped berries with good skin firmness and a pleasantly sweet flavour
- Shelf-life is good
- 62% of berries exceeded 32mm in size and a Class I percentage of 88% in trials
- Well displayed fruit on long trusses ensure fast and economical picking
- Malling™ Champion is resistant to Crown Rot and Verticillium Wilt and has moderate resistance to Powdery Mildew
- Extremely tolerant to wind and rain damage

**Certified Stock: Mini-tray Plants: £380 per/1000**

Malling™ Champion

Finesse © RW Walpole | August 2017

### Finesse EU 34837

- Medium to large, heart shaped berries with attractive bright red colour, a waxy finish and with good skin strength and shelf-life
- Well balanced flavour with a juicy texture and average Brix of 9.5
- 50% of the berries exceed 35mm in trial with a yield potential in excess of 1.2 kg per plant
- Good resistance to Crown Rot. Plant vigour is good and runner production limited
- Finesse has excelled when grown in soil or secondhand substrate

**Certified Stock: 40 cell Mini-tray Plants: £375 per/1000**

### Malling™ Opal

- An EMR bred everbearer, Malling™ Opal was selected as an early season, vigorous and high yielding variety cropping heavily in July and August
- The variety produces large, attractive conical berries with a good flavour and consistently high Brix levels
- The berries are firm with good shelf-life

**Certified Stock: Bare Root Plants: £260 per/1000**

**Spring Potted Plants: £360 per/1000**

### Flamenco EU 14769

- Widely grown and popular variety for PYO this late season EMR bred everbearer has proven to be a reliable producer of quality berries
- The attractive berries are medium to large in size. Consistently uniform and conical in shape with a glossy orange-red colour. Skin strength, fruit firmness and flavour are all good
- Picking commences in late July and peak production occurs in September
- The variety has good resistance to Verticillium Wilt and performs well when grown in soil

**Certified Stock: Bare Root Plants: £265 per/1000**

**Spring Potted Plants: £375 per/1000**

# raspberries | YOUR CHOICE OF PLANTS

Raspberry Production Field

## Standard Cane

- Field grown on our Norfolk Farms
- Inspected to Basic, Certified and AH standards
- Fresh lifted November – February
- March - May delivery ex-cold store at £13/1000 surcharge
- Reliable and traditional method of establishment

## Root

- Field grown in Norfolk
- Inspected to Basic, Certified or AH standard
- All root is washed, cold-stored at -2°C and supplied in units of 8kgs
- Ideal for long distance shipping
- Please order by the end of February

## Long Cane

- Field grown and Certified
- Lifted when dormant and bench graded to ensure uniformity and quality
- Plant fresh lifted cane January - February
- Later plantings use cold-stored cane - cost £50/1000 plus £3.70 per week charge from mid-February
- Poor conditions will risk reduced bud break and smaller berries

## • Spring Potted Plants

- Produced from stock inspected to Basic, Certified or AH standard
- Available end April - mid June
- Larger 40 cell units to improve establishment and guarantee quality and delivery
- Enrosadira, Glen Carron, Glen Dee and Kwanza only

## NEW PRODUCT

Cold-stored raspberry tray plants available upon request.

40 Cell Spring Potted

Long and Standard Cane

Enrosadira

### Enrosadira EU 48949

- Early season
- Attractive, large, bright red conically shaped berries of high quality
- Easily picked, firm fruit with a good aromatic flavour and very good shelf-life
- Vigorous selection with short laterals and small spines
- Highly productive when cropped as a primocane and florican
- Enrosadira is the most promising primocane to be launched in the last few years and is being rapidly adopted commercially throughout Western Europe

Gilberto Molari reports that in trials in Italy Enrosadira produced over 2.5kg fruit per plant with both the autumn and spring crops with 97% Class I berries.

	kg/plant	kg/m2	50% harvest	% Class 1
Kwanza	1.25	1.78	03/09	78.6
Enrosadira	1.23	1.75	22/08	88.7

Kwanza®

## Advanced Berry Breeding

**Kwanza®** 'Advabertwee' EU 40336

- Very large (6gms), bright, attractive orange-red berries make this a stand-out variety
- The berries are firm, with excellent shelf-life with a superb flavour and are consistently sweet throughout the harvest period and do not darken after picking
- Compact, upright growth habit with large leaves and few basal shoots or spines with well presented fruit

**Imara®** 'Advabertwee' EU 40335

- The earliest of the ABB varieties cropping at the end of July and with a 50% pick date in early September
- Uniform, attractively coloured easily picked berries with excellent shelf-life. High yield potential (1.8kg/plant in trial at PCF Tongeren)

Kweli®

**Kweli®** 'Advabertwee' EU 40334

- Three weeks later than Imara® with a 50% pick date at the end of September
- Large, attractive, orange-red berries have exceptional shelf-life and do not darken after harvest
- Well flavoured and easily picked

### LICENCING ARRANGEMENTS

All growers will be required to sign a Fruit Producers Licence. A signature fee of €350 is charged by ABB to growers planting in excess of 3000 cane in addition to an annual payment of €0.50-0.40 per linear metre of crop. Where an order is under 3000 plants a €0.75 royalty rate will be added to the plant price upon confirmation. For further details of the licencing arrangement contact Michelle.

Paris

**Paris** EU 43223

- Very productive, high yielding quality selection
- Large, bright and attractively shaped berries
- Highly rated for flavour and eating quality
- Firm fruit with excellent shelf-life
- Mid-season primocane, 15 days later than Polka
- Vigorous canes with some thorns, producing short, strong laterals

**Versailles** EU 43224

- Very large fruit with berries up to 12gms
- Very bright, attractive, lightly coloured berries
- Excellent eating qualities with a good sugar/acid balance
- Firm fruit, holding well on the plant with good shelf-life
- Second early season, 7-10 days later than Polka
- Vigorous, easily managed thorn free canes producing fruit on very short laterals which is quick and easy to pick

Versailles (and a €2 coin!)

**IMPORTANT NOTE - AVAILABILITY**

Both these very interesting selections are available to growers throughout the EU without restrictions. They carry a substantial royalty per plant when purchased but other than a standard non-propagation agreement the grower needs no special licence nor incurs any further costs.

# raspberries | primocane

## Joan J EU 10236

*Another outstanding raspberry bred by Dr Derek Jennings. Joan J, named after his wife, is a large fruited, high yielding spine-free primocane producing berries of exceptional eating quality.*

Joan J

- Joan J commences picking at the end of July and crops for a seven week season
- Berries are typically 6gms in early picks and decline slightly to 5gms later in the season. Overall yield is excellent
- The flavour is exceptional and the berries have a pleasing fleshy texture when eaten. The berries freeze well without an apparent increase in acidity and jam made with this variety is outstanding
- Fruit colour is slightly dark on the cane and darkens further after picking. Daily harvesting is recommended
- The canes are stout, spine-free and numerous and their growth is vigorous, tall and erect
- Joan J is justifiably a great favourite with knowledgeable mature growers and the PYO industry and is widely grown as a processing variety in Poland and the Ukraine

**Approved Health: Standard Cane: £685 per/1000**

**Root: £17.50 per/Kg**

Raspberry propagation at Narborough, Norfolk

## Autumn Treasure EU32811

- A good quality mid-season primocane from EMR producing very attractive, bright, cohesive berries of 3.5gms to 5gms, and with a 50% pick date in late August
- The canes are strongly erect and spine free
- Strongly resistant to Root Rot, Verticillium Wilt and Powdery Mildew
- Recommended for organic and low input growing systems

**Certified Stock: Standard Cane: £680 per/1000**

**Root: £17.50 per/Kg**

## Himbo Top® EU 13008 Var 'Ralzaque'

- Large, bright, cohesive berries of 6gms to 8gms, that detach easily, do not darken after picking, and with good flavour
- A late season variety with peak production in late September - early October
- The long, vigorous, canes need good support

**Approved Health: Standard Cane: £886 per/1000**

**Root: £21 per/Kg Potted: £927 per/1000**

## Polka EU14918

- Very productive, early, Polish bred variety producing large (6.6gms), evenly conical berries with excellent flavour
- Firm berries with good shelf-life but darken after picking
- Vigorous, upright habit
- With good disease resistance

**Certified Stock: Standard Cane: £721 per/1000**

**Root: £19.50 per/Kg Potted: £773 per/1000**

## Autumn Bliss

- Cropping from the end of July until the first frosts of autumn this variety produces medium sized berries, (typically 3.3gms) with a pleasant flavour
- The short erect, strong canes need only a minimum of support
- Limited to amateur use

**Certified Stock: Standard Cane: £618 per/1000**

**Root: £15.50 per/Kg Potted: £670 per/1000**

# raspberries | florricane | **NEW FOR 2019**

Glen Carron

## **Glen Carron** EU 49479

*Bred at JHI on behalf of the Raspberry Breeding Consortium and trialed as 0485K-1. It is the latest variety to be added to the JHI portfolio.*

- Glen Carron is an early to mid-season selection cropping over a four week period
- The high quality, large berries are consistently larger than Tulameen at 5.4gms, bright red, and with a high gloss and a high Class I percentage. The berries are long, conic in shape, well presented and pick and plug easily; they are very sweet (11.8 Brix) with low level of acidity. The berries have good shipping characteristics and have outstanding shelf-life
- The variety is vigorous, producing a good show of strong, spine-free canes
- The fruit is well displayed with strong laterals

- Resistant to Cane Botrytris, Spur Blight and Raspberry Aphid
- Suitable for soil or substrate production
- Glen Carron has a high chill requirement (minimum 1200 hours)

Approved Health: Standard Cane: £1000/1000

Nikki Jennings - JHI

Glen Carron has been in trials since 2010

*"Its all about flavour with this raspberry...it always does amazingly well in blind tastings. Glen Carron is also the prettiest raspberry we have seen for a long time"* Nikki Jennings - JHI

Malling Juno

### Malling Juno EU 45409

- Bred at East Malling. Malling Juno is a very early season selection
- Picking commences at the same time as Glen Moy but the condensed season gives a 50% pick date five days earlier
- Firm, medium to large, cohesive berries. Attractive mid-red colour similar to Glen Ample with a good, sweet flavour
- Spine free, reasonably vigorous, easily handled cane. Laterals are of medium length and strongly attached
- Good disease resistance but susceptible to Raspberry Root Rot
- A very early and even bud break suggests that Malling Juno has potential for early, protected cropping

**Certified Stock: Standard Cane: £680 per/1000**

**Long Cane: 1.2m: £929 per/1000**

**Root: £17.50 per/Kg**

### Malling Minerva

- A high yielding reliable variety that crops one week ahead of Glen Ample and produces well presented berries with an even and attractive conical shape
- Firm medium sized fruit with good colour, flavour and shelf-life
- Spine-free with an easily managed, compact habit, susceptible to Root Rot

**Approved Health: Standard Cane: £660 per/1000**

**Long Cane: 1.2m: £909 per/1000**

**Root: £17.50 per/Kg**

Malling Juno

# raspberries | Main Season | floricane | Listed in order of cropping

Glen Ample

## Glen Ample EU 2729

*Glen Ample, bred by JHI in Scotland, is the most widely grown floricane in the U.K and much of Northern Europe. This versatile cultivator consistently produces a high yield of large, high quality fruit.*

- A mid-season, vigorous, spine-free variety producing consistently high yields of 7-10 tonnes/ ha in commercial production
- Glen Ample produces large, fleshy berries of 4gms to 6gms, round conical in shape and attractively bright red in colour
- The berries are firm with a pleasant aromatic and sweet flavour
- The fruit holds well on the cane and has excellent shelf-life
- Spawn production is prolific and vigorous, fruiting laterals are of medium length and upright presenting the fruit well
- Resistant to the large Raspberry Aphid but susceptible to Root Rot, Spur Bright and Cane Rust

**Certified Stock: Standard Cane: £637 per/1000 Root: £15.50 per/kg  
Long Cane: £886 per/1000**

Glen Ample

Raspberry Field

### Glen Fyne EU 27262

- Mid-season selection from JHI
- Glen Fyne produces firm, bright, cohesive berries, attractively coloured and with good shelf-life. The berries are fine flavoured and aromatic and produced over a long picking season
- Moderately vigorous producing long and strong spine-free canes
- Glen Fyne is very susceptible to Root Rot and needs to be grown on clean sites with both protection and careful management. Where Root Rot is a problem the variety must be grown in substrate

**Certified Stock: Standard Cane: £696 per/1000 Root: £17.50 per/kg  
Long Cane: £945 per/1000**

Glen Fyne

### Tulameen

- A mid-season variety picking over a long period
- The attractive glossy berries are large, firm and cohesive with excellent flavour
- Strong vigorous canes up to 2 metres in height with few spines
- Susceptible to Root Rot and other diseases
- All cane derived from selected German stock

**Certified Stock: Standard Cane: £637 per/1000 Root: £15 per/kg  
Long Cane: £886 per/1000**

Tulameen

# raspberries | Main/Late Season

Octavia

## Cascade Delight

*This vigorous high yielding variety has rapidly gained popularity in response to its very effective field resistance to Root Rot.*

- The berries are large (5gms), glossy, long, conic in shape, easily detached and with excellent flavour. The variety has a similar season to Tulameen picked over a 46 day period in a recent AHDB Trial
- Cascade Delight is vigorous, strongly upright and slightly spined, with most of the spines located on the base part of the cane. Long fruiting laterals need support

**Certified Stock: Standard Cane: £660 per/1000**

**Root: £17.50 per/Kg**

Cascade Delight

## Late Season

### Octavia EU 14919

- Bred at East Malling Octavia is the latest cropping florican available with a 50% pick date consistently 12 days later than Glen Ample. The berries are large, averaging over 5gms in trials, uniform, firm and easily detached. The flavour is pleasant and the colour good, if a little dull some seasons. The fruit has an excellent shelf-life
- Octavia is a moderately vigorous, thorny variety producing strongly upright canes with well presented fruit and with excellent yield potential. Susceptible to Root Rot but resistant to Cane Botrytris and Cane Spot. Octavia has exceptional winter hardiness and survived -30°C in Poland

**Certified Stock: Standard Cane: £670 per/1000**

**Long Cane 1.2m: £917 per/1000 Root: £17.50 per/Kg**

Octavia

Glen Dee

### Glen Dee EU 49182

*A consistently high yielding late season floricanne with a mid-pick date 5 days later than Octavia in Scotland but a few days earlier than Octavia in England, vigorous and spine-free.*

- Glen Dee produces consistently large (6.2gms), pale pink-red berries, conical in shape and with a sweet raspberry flavour, a slight acid bite and a creamy texture. The berries are easily and economically picked, firm and with outstanding shelf-life
- Spawn production is vigorous and prolific with a strong upright habit. The variety has a tendency to break a small percentage of it's buds under warm early winter conditions. The variety can be slow to establish in some seasons
- Susceptible to Root Rot and needs to be protected by routine application of fungicide. Ensure that Raspberry Beetle controls coincide with flowering

Glen Dee

Approved Health: Standard Cane: £742 per/1000

Spring Potted Plants: £732 per/1000

Root: £17.50 per/Kg

	Mean yield/stool	Mean fruit size (g)	Mean Brix °	End Pick Date
Glen Dee	1833	5.5	10.7	28th August
Glen Ample	1704	4.2	7.9	15th August
Octavia	1241	5.3	8.9	22nd August

Taken from replicated 5-plant plots at the James Hutton Institute, Dundee.

# raspberries | Processing - Machine Harvestable Variety

Glen Ericht

## Glen Ericht EU 30310

*A new, Phytophthora tolerant, high yielding, machine harvestable, processing selection from JHI.*

- Glen Ericht is an extremely productive early season variety that produces good sized, firm and cohesive berries. The fruit is dark red with a good aroma, moderate Brix levels and high acidity making the fruit highly desirable for the processing and freezing market but unsuitable for fresh usage
- Yields in excess of 5kg per stool have been recorded in trials. Glen Ericht is strongly tolerant to Root Rot
- Canes are strongly erect, spine free and easy to manage

- Fruit is well presented on strong laterals and plugs easily. Glen Ericht has proven ideal for machine harvesting using a Korvan machine

**Approved Health: Standard Cane: £700 per/1000 Root: £18 per/Kg**

## Cowichan

- A Canadian bred, mid-season variety giving good yields of quality berries
- This vigorous cultivar has strongly upright canes and is well suited to machine harvesting

**Certified Stock: Standard Cane: £900 per/1000**

# blackberries

Loch Tay

## Loch Tay EU 16917

*Bred by JHI in Scotland, Loch Tay is a high quality, spine-free blackberry now widely grown throughout Europe.*

- Early season variety that consistently starts to pick in the first week of July in England and crops for a full six weeks
- The berries are 4.5gms to 5gms in weight, firm, uniformly round, with a rich black glossy appearance
- The flavour is superb and the berries sufficiently sweet to be offered as the 'sweet' option by UK supermarkets
- The berries have an excellent shelf-life with little tendency to bleed allowing the variety to be profitably grown at considerable distance to its market
- Loch Tay does not appear to be as susceptible to Red Berry Mite as other varieties and is resistant to Purple Blotch
- The variety has a semi-erect spine-free habit similar to Loch Ness but with improved vigour
- Propagated from Virus Indexed, Pre-Basic mother plants supplied by JHI

Loch Tay

# blackberries

## Loch Ness

*Bred at JHI by the renowned Rubus breeder, Dr. Derek Jennings, Loch Ness is a high yielding, high quality, spine-free variety.*

- Picking reliably commences in mid-July in England and normally extends until mid-October with an even production of fruit throughout the picking period
- The berries are large, typically 5gms to 6gms, very firm with a rich glossy black colour. The flavour develops as fruit ripens and is very pleasant when the berries are fully ripe. Shelf-life is excellent
- Loch Ness has good resistance to Purple Blotch and Botrytris but warm and wet weather in June can highlight the variety's susceptibility to Downy Mildew which needs to be controlled on a regular basis
- The variety produces strongly erect canes that can be tip-pruned when the primocane has reached the top wire to induce branching. Loch Ness has excellent winter hardiness and can be successfully grown under a wide range of challenging climatic conditions
- Recommended planting distances vary from 1.25m to 2.0m depending on soil fertility and the availability of irrigation

Loch Ness

# blackberries

## Early Season | Listed in order of cropping

### Obsidian

- Very early, high yielding, vigorous, trailing spiny variety
- Large, firm, even shaped, glossy berries with an excellent, dark colour which is retained when chilled or frozen
- Condensed season but good flavour and shelf-life
- Good resistance to major disease

### Karaka Black EU 10720

- The best of the early season spring varieties
- Large, long cylindrical berries of 10gms to 11gms, firm and with a dark black shiny appearance, mild flavour and excellent shelf-life
- Picking commences in early July and extends over a long fruiting season until mid-August. Yields regularly exceed 15 tonnes/hectare in commercial plantations
- Moderately vigorous with some resistance to Downy Mildew. Plant spacing of 1m recommended

### Black Butte

- Mid-July ripening, thorny, trailing variety
- Well flavoured berries of exceptional size

### Loch Tay (see page 30)

## Main Season | Listed in order of cropping

### Asterina

- Bred in Switzerland and the result of a cross between Loch Ness and Chester
- Asterina produces very large, bright and shiny berries with an excellent blackberry aroma and an exceptional flavour
- Picking commences in mid-July and extends over a prolonged period
- This vigorous, thornless, upright variety is recommended for both PYO and amateur use

### Loch Ness (see page 31)

Asterina

# blackberries

## Late Season | Listed in order of cropping

### Chester

- A high quality late season variety picking from mid-August until the first frosts although quality declines during October
- Well presented shiny black berries of 5gms to 6gms with an attractive flavour and good shelf-life
- Very high yield potential with crops often exceeding 30 tonnes/hectare
- Extremely vigorous, semi erect, thornless canes that respond well to tip pruning
- Disease resistance is good with no evidence of Downy Mildew or Purple Blotch

Buckingham Tayberry

### Triple Crown

- A semi-erect, spine-free, late season variety
- The berries are larger than those of Chester with a bright shiny appearance and excellent flavour although somewhat softer
- Cropping commences from mid-August and continues until the first frosts

## Hybridberries

### Buckingham Tayberry

- A thornless variant of the original Tayberry
- Strong canes, high yield and uniquely flavoured fruit
- Recommended for PYO and amateur use

### Loganberry LY654

- A superior, thornless, variant of the original Loganberry hybrid that was identified in 1881 (and was the result of a cross between a red raspberry and a blackberry)
- Ripening from mid-July the large and distinctly coloured and flavoured berries crop until the end of August
- The berries are soft and the use restricted to PYO and amateurs

HYBRIDBERRY PRICES £/100	£/100 9cm Pots	2-Litre Pots	3-Litre Pots

Loganberry	185	375	425

CAC grade only

# gooseberries

## Early Season

### Invicta

- Vigorous, high yielding variety with large, oval, smooth skinned berries that ripen to a pale yellow colour with excellent flavour
- Growth is vigorous, spreading and thorny and the variety rapidly reaches its full yield potential. Some resistance to Mildew but susceptible to Phytophthora

## Mid Season

### Pax EU 4561

- Virtually spine-free dessert variety producing dark red fruit of medium size (7.4gms) with a good flavour and a yield potential in excess of 1.5kg per bush
- Vigorous and spreading with occasional spines on young wood. Resistant to Mildew and Leaf Spot. Difficulties in propagation restrict the availability to potted plants only

### Hinnomaki Red

- A mid-season, hardy variety producing a heavy crop of medium sized dark red fruit on a semi-upright bush. Resistant to Mildew

## Late Season

### Captivator

- A virtually spine-free, red fruited variety with a vigorous spreading habit and producing sweet, burgundy red pear-shaped berries in late July
- Mildew resistant
- Highly recommended to PYO growers

### Hinnomaki Yellow

- A late season, yellow fruited dessert variety with a distinctive aromatic flavour
- Resistant to Mildew

All Ribes are offered as CAC stock

## SPECIALIST DESSERT VARIETY

### Ebony

- Very large, superbly flavoured sweet berries (up to 15% Brix) make Ebony a genuine dessert blackcurrant and sets a new standard for this crop. Highly recommended for PYO growers
- The variety ripens in early July, two weeks ahead of Ben Connan
- The bush is moderately vigorous with an open spreading habit and can be successfully grown as a cordon and on wires
- Resistant to Powdery Mildew. Needs protection against Gall Mite

Two Year Bushes: £280 per/100 Bushes

## CULINARY VARIETIES

### Ben Connan UK5379

- The most popular early season culinary variety carries high yields in excess of 4kg per bush. The large berries, carried on strigs of medium length, have a good sharp flavour
- Resistant to Leaf Curling Midge, Mildew and Leaf Spot

Two Year Bushes: £260 per/100 Bushes

### Ben Sarek

- An early cropping, high yielding variety producing well flavoured large berries
- Neat, compact bushes, rarely more than 1m in height and resistance to both frost and Mildew add to Ben Sarek's appeal

Two Year Bushes: £240 per/100 Bushes

Ebony

All Ribes are offered as CAC stock

# redcurrants

## Rovada

- This late variety is now by far the most widely planted cultivar due to its high yields of superb quality fruit. Long strigs, large berries and a bright, attractive appearance make this the most outstanding variety currently available

## Jonkheer van Tets

- A vigorous, upright bush which flowers early and produces long trusses of large, deep-red berries. This variety crops during the second half of July and reliably produces a very heavy crop of good flavoured fruit

## Junifer

- A very high yielding, very early selection from France. The earliest variety currently available, Junifer produces easily picked, good quality fruit commencing in early July
- This variety crops heavily in the first year wood giving a good yield immediately after planting

Two Year Bushes: Three Stems plus: £240 per/100

All Ribes are offered as CAC stock

# asparagus

## Mid Season

### Gijnlim EU023276

- A high yielding, mid-season, all male clonal hybrid that is, justifiably, the most widely planted cultivar in the UK. Top of the AHDB trial for yield and producing the greatest number of spears over 10mm in diameter Gijnlim produces medium sized, uniform spears with excellent tip closure
- Tolerant to Stemphylium and Puccinia

NAKT Select Plant Certified : £475 per/1000

## Late Season

### Guelph Millennium

- This late season, all male hybrid produces heavy yields of high quality spears over a comparatively short season
- Tip closure is good, especially in the warmer conditions and the variety performs well on a range of soil and on replant sites

NAKT Select Plant Certified : £385 per/1000

## Early Season

### Timperley Early

- This is the earliest variety available and is widely used for very early forced crops as well as for producing early outdoor rhubarb in February and March. In both situations the yield is not high but is compensated by the earliness of the variety. The sticks are red at the base grading to green at the top, with good thickness and length as the season progresses
- Flavour is good

Uncertified: £135 per/100 Crowns

## Mid Season

### Victoria

- A highly productive mid-season variety first introduced in 1837
- This variety produces long, thick, red stalks of high quality giving a high percentage of Class I product with excellent flavour. Victoria is high yielding and easy to grow

Uncertified: £135 per/100 Crowns

## Specialist Varieties

### Fultons Strawberry Surprise

- Attractively named variety producing uniform, vivid red stems on a vigorous plant
- Best flavoured variety in RHS Wisley Trials and awarded RHS Award Garden Merit
- Ideal for large container growing

### Groveless Crimson

- Compact plant producing a good crop of fully coloured bright red stems, less acidic than other cultivars

### Raspberry Red

- A synonym for the outstanding Polish variety, Malinowy
- High yielding with lovely quality, bright red stems

All Specialist Varieties

Uncertified: £150 per/100 Crowns

# specialist nursery products

*We have brought together a unique selection of fruit varieties that offer, above all else, superb flavour and will have particular appeal to the gardener and lover of fine food.*

## Strawberries

**Snow White** EU 43037  
Trademark 013886271

A high yielding, vigorous variety producing attractive medium sized uniform, conical, berries. Bred by Dr Klaus Olbricht at Hansabred in Dresden, Snow White has a delightful aromatic flavour reminiscent of pineapple.

Approved Health : £350 per/1000

Snow White

## Royal Sovereign

Bred in 1892 this variety has a reputation for fruit quality and flavour and was the most widely grown variety in the UK for forty years from 1920 until 1960. It has an enthusiastic following with knowledgeable gardeners.

Approved Health : £180 per/1000

Royal Sovereign

## Raspberries

### Glen Coe

The result of a cross between a black raspberry and Glen Prosen this variety produces rich purple fruits with a superb flavour and makes superb jams, sauces and wine. Glen Coe is a vigorous mid-season variety producing a moderate number of spine free canes for each stock.

CAC: 9cm Pots : £250 per/100

Two Litre Pots: £410 per/100

Glen Coe

## Rhubarb

### Rosenhagen

Selected in Sweden in response to the demand for less acidic, easier eating and sweeter tasting rhubarb. Rosenhagen has the lowest oxalic acid content of over 70 selections tested. Productive and high yielding.

Uncertified Potted Plants £150 per/100

Rosenhagen

# Small Quantities

## Small Quantities

We are pleased to offer small quantities of strawberry plants, raspberry canes, blackberries, hybridberries, blueberries, currants, gooseberries, rhubarb and asparagus.

- Material is packed to a mail order standard
- Contact the office to request a pdf pricelist which can be e-mailed or posted to you or call the office for a quote
- Orders are despatched by a local parcel carrier to ensure the goods arrive in excellent condition
- If product is in season your order can be dispatched within two working days

PRICES FOR SMALL QUANTITIES	
Fresh Lifted Strawberry Plants	£4.50/10 plants
Cold-stored Strawberry Plants	£4.80/10 plants
Blackberry/Hybridberry 9cm pots	£4.12/each
Currants 2yr old Bare Rooted Bushes	£3.10/each
Raspberry Canes	£12.40/10 canes
Gooseberry 2yr old Bare Rooted Bushes	£13.15/3
Asparagus 1yr old Bare Rooted Crowns	£6.95/10

Small Orders ready for despatch

## **IMPORTANT NOTE:**

**THESE TERMS AND CONDITIONS HAVE BEEN REVISED IN AUGUST 2017 AND SUPERSEDE THOSE PUBLISHED PREVIOUSLY.**

We formally ask that you study these Terms and Conditions before signing our Order Confirmation which confirms that you have read, understood and agree to them, and we particularly draw your attention to sections 5, 6 and 7, which detail the limitations to our liabilities.

### **1. These conditions and statements**

- 1.1 The conditions set out here are the only terms and conditions on which we sell goods or supply services and, unless you and we both otherwise expressly agree in writing, they will apply absolutely. These terms and conditions override and supersede any other terms and conditions that may have been sent to you previously; and override any purchasing terms set out in any customer's purchasing note.
- 1.2 In these conditions:-
  - 1.2.1 "Goods" means all goods and/or services to be supplied by us to you;
  - 1.2.2 "we", "us" and "the Company" means RW Walpole Ltd;
  - 1.2.3 "you" means the company person or legal entity buying the goods;
  - 1.2.4 "Contract" means the contract between you and us for the sale and purchase of Goods in accordance with these conditions;
  - 1.2.5 "Confirmation of Order" means the document sent to you by us confirming our receipt of your order and specifying the Goods;
  - 1.2.6 "Delivery" means delivery of the Goods in accordance with clause 4 of these terms and conditions.
- 1.3 The Contract represents the entire agreement between the parties. You acknowledge that you have not relied upon any statement promise or representation made or given by or on behalf of the Company which is not set out in the Contract. Any drawings, descriptive matter or advertising and any descriptions advice or illustrations contained in the Company's catalogues, brochures or website are produced for the sole purpose of giving an idea of the goods described in them. They shall not form part of the Contract or any other contract between you and us.
- 1.4 Any typographical, clerical or other error or omission in any quotation or Confirmation of Order or other document issued by R W Walpole Ltd, shall be subject to correction without liability on the part of R W Walpole Ltd.
- 1.5 A quotation for the Goods shall not constitute an offer from us. A binding contract shall only come into existence upon our receipt of a signed Confirmation of Order from you.
- 1.6 When Goods are offered Ex Works R W Walpole Ltd undertakes to make the goods available for collection by the buyer from R W Walpole's premises as agreed. The buyer will make arrangements for shipping, insurance cover and obtaining export and import licences. R W Walpole Ltd will render any assistance in obtaining an export licence at the buyer's request, risk and expense.

### **2. Orders**

- 2.1 All goods are offered and sold subject to the plants being unsold at the time of receipt of a signed Confirmation of Order by R W Walpole Ltd.
- 2.2 It is the responsibility of the buyer to check that the Confirmation of Order accurately reflects all aspects of their order including but not limited to quantities, varieties, grades, certificates (where applicable) and delivery dates and prices agreed.

### **3. Prices**

- 3.1 Except as otherwise stated under the terms of any quotation and specifically agreed in writing between you and us, all prices are on an ex-farm basis and are as detailed on the Confirmation of Order. Where we agree to deliver the plants otherwise than at R W Walpole Ltd's premises, you shall be liable to pay R W Walpole Ltd's charges for packing, insurance and transport and for any phytosanitary inspection or documentation charges that may be necessary.
- 3.2 The Company reserves the right to charge separately for the cost of FPCS Certification or any other relevant certification or inspections.
- 3.3 Unless stated in writing to the contrary, any quotation or unsigned Confirmation of Order is valid for a maximum of 30 days from the date of issue, provided that the Company has not previously given you notice of its withdrawal.
- 3.4 If the Goods sold as agreed in writing are of foreign origin, the Company reserves the right to adjust the price payable by you so as to reflect any alteration in the value of the £ sterling in terms of currency in the country of origin of the Goods between the date of written confirmation of sale and the date of invoice.

## 4. Delivery

- 4.1 We reserve the right to deliver an order by separate instalments. In such cases each instalment shall be invoiced and paid in accordance with the Contract.
- 4.2 Delivery of Goods shall be made by you collecting Goods from our premises within three business days after we have notified you that the Goods are ready for collection or, if we have previously agreed in writing some other place of delivery, by us delivering the Goods to that place. You will make all arrangements necessary to receive delivery of the Goods in the manner agreed whenever they are tendered for delivery.
- 4.3 Any Goods not collected by you within the above timescale (time being of the essence) or not accepted where Delivery takes place somewhere other than our premises may be resold or returned to our supplier at our discretion. You shall remain liable to us for the Contract price, less any sum we have been able to recover by sale or return of the Goods.
- 4.4 Any Delivery times quoted by us on the Confirmation of Order or other literature are estimates only, however, if we fail to deliver within a reasonable time after the quoted delivery time, provided the Goods have not been dispatched to us by the supplier you may, by informing us in writing, cancel the Contract. In those circumstances:
  - 4.4.1 We will refund the purchase price of the Goods to you less any expenses reasonably incurred by us in relation to the Contract; and
  - 4.4.2 Save as provided for in clause 4.1 above, you can have no further claim whatsoever against us under that Contract.

## 5. Warranties and Liability

**This section sets out our warranties and liabilities and particularly the limits to our liabilities.**

**NB: The reason for these limitations of liability is that whilst we, and other propagators from whom we have purchased plants, have taken all reasonable care and have managed our crops according to current accepted husbandry practices this does not guarantee trueness to type in all circumstances nor freedom from pests and diseases. The price of our goods reflects these limits to our liability. Anyone wishing to purchase plants with specific guarantees is invited to make their requirements known to the company and we will, if possible, provide a quotation that meets these requirements.**

- 5.1.1 When shown on our paperwork as FPCS certified, R W Walpole Ltd warrant that the strawberry plants and raspberry canes have been grown and produced to APHA Plant Health standards and inspected and certified under the EU Fruit Plant Certificate Scheme (FPCS). Details of the FPCS certification scheme, including the tolerances for visible signs of pest(s) and disease(s), are published on the following website [www.gov.uk/guidance/fruit-propagation-scheme](http://www.gov.uk/guidance/fruit-propagation-scheme) and are available from R W Walpole Ltd on request. FPCS grades Basic and Certified for both strawberries and raspberries are inspected and certified as true to type based on visual assessment of botanical characteristics, but the inspections do not guarantee the identification of possible genetic mutations. Material certified at the FPCS grade, Approved Health(AH), is inspected and certified as to health but not in respect of trueness to type.
- 5.1.2 When shown on our paperwork as UK Plant Passport Grade, R W Walpole Ltd warrant that the strawberry plants, raspberry canes and other Rubus plants have been grown and produced to UK Plant Passporting regulations as inspected by FPCS inspectors. Details of UK Plant Passport Regulations including pest and disease tolerances are available from: <https://www.gov.uk/guidance/issuing-plant-passports-to-trade-plants-in-the-eu>
- 5.1.3 For all other plant material, the country of origin and relevant certification or passporting status, where applicable, is shown on our paperwork. Full details of these protocols are available on request from R W Walpole Ltd. Plant material not eligible for EU Plant Passporting Regulations or Certification, e.g. Rhubarb, blueberries etc is shown as uncertified and is not subject to any official inspections.

### 5.2 The above warranty is given by R W Walpole Ltd subject to the following conditions:

- 5.2.1 The Company accepts no liability whatsoever for plant material not eligible for EU plant passporting regulations or certification as it is not possible for the Company to guarantee the quality of such plant material.
- 5.2.2 R W Walpole Ltd shall be under no liability for latent diseases or latent defects which may be present but not detected by any inspectors when inspecting plants under FPCS or any other certification or passporting scheme either in the UK or the country of origin of the material, and such certificate or passport shall not be challenged in any subsequent test or inspection.
- 5.2.3 R W Walpole Ltd shall be under no liability in respect of any problem arising from wilful damage, negligence or failure to follow the accepted tenets of good husbandry by you or any other party including the use of inappropriate fertiliser or pesticide treatment applied to the plants, substrate, or soil in which the plants are growing.
- 5.2.4 R W Walpole Ltd shall be under no liability whatsoever if the total price of the Goods has not been paid by the payment due date.

- 5.2.5 The yield a plant will produce is dependent on many factors, many of which are outside of our control. Guidance on likely yields and the timing of those yields in favourable conditions can be found in our brochure, and we are confident that the goods that we supply are true to type, healthy and free from pests at the time of Delivery however, R W Walpole Ltd does not guarantee the yield of the plants in any respect whatsoever. It is the Buyer's responsibility to ensure that the Goods are suitable for his particular purpose, and we cannot be held liable for any failure of the Goods to produce the expected crop.
- 5.2.6 Where a Laboratory test for any pest, disease or virus has been carried out by the Company or any third party on harvested plants prior to delivery and found to be negative, this result shall be deemed to be conclusive and cannot be challenged by any subsequent customer instructed tests.
- 5.2.7 Our liability to you shall be limited:
- i) where the loss or damage, however sustained, is in respect of all the Goods delivered or collected, to the invoice price of the Goods;
  - ii) where the loss or damage, however sustained, is in respect of part of the Goods, to the appropriate proportion of the invoice price which that part of the Goods bears to the total invoice price of all the Goods. We shall not in any case be liable for wasted expenditure, loss of profit, increased cost or any other indirect, consequential or economic loss, injury or damage without limitation.
- 5.2.8 Under no circumstances will R W Walpole Ltd consider valid or be liable for any complaint relating to quality, pests, diseases or other alleged disorders of plants supplied unless notified to us at Ivy Farm, Terrington St. Clement, King's Lynn, Norfolk PE34 4PX within 72 hours after Delivery and subsequently confirmed to us in writing within the next 48 hours either by post, fax or email (upon confirmation of the "message read" acknowledgement). In the event of a written complaint, R W Walpole Ltd has the right of access to your premises to inspect the plants and to take samples and to inspect and take copies of your inspection records if relevant. Time is of the essence for the purposes of this condition.
- 5.2.9 Where a valid claim exists in respect of any Goods, based on any defect in the quality, condition or specification, R W Walpole Ltd shall be entitled, at our own discretion, to refund to the customer the price of the Goods or to replace the Goods. R W Walpole Ltd will have no further liability to the customer.
- 5.2.10 R W Walpole Ltd does not hold Product Liability Insurance. All customers should hold their own insurance for consequential loss.
- 5.2.11 The warranties given in these terms and conditions apply to the Customer and cannot be assigned without our written agreement.
- 5.3 All warranties, conditions and other terms implied by statute or common law (save for the conditions implied by section 12 of the Sale of Goods Act 1979) are, to the fullest extent permitted by law, excluded from the Contract.
- 5.3.1 Nothing in these conditions excludes or limits our liability:
- a) For death or personal injury caused by our negligence; or
  - b) Under section 2(3), of the Consumer Protection Act 1987; or
  - c) For any matter which it would be illegal for us to exclude or attempt to exclude its liability; or
  - d) For fraud or fraudulent misrepresentation.
- 5.3.2 a) Our total liability in contract, tort (including negligence or breach of statutory duty), misrepresentation, restitution or otherwise, arising in connection with the performance or contemplated performance of the Contract shall be limited to the Contract price; and
- b) We shall not be liable to the Customer for loss of profit, third party claims, loss of business, increased costs or depletion of goodwill in each case whether direct, indirect or consequential compensation howsoever caused which arises out of, or in connection with, the Contract.
- 5.4 Liability for any latent defects or latent diseases is specifically excluded.

## 6. Buyers Responsibilities Upon Delivery

- 6.1 In order to take advantage of the remedies provided by these terms or any remedy provided by the general law the Buyer must comply with the responsibilities set out in this clause.
- 6.1.1 The buyer must diligently inspect and satisfy himself as to the quality and fitness for his purpose of the Goods as soon as practicable following Delivery and keep a contemporaneous record of such inspection and disclose those records to the company upon request in the event of a complaint. Any complaint whatsoever concerning the Goods, must be notified to us at Ivy Farm, Terrington St. Clement, King's Lynn, Norfolk PE34 4PX within 72 hours after Delivery, and subsequently be confirmed in writing within the next 48 hours by either post, fax or email (upon confirmation of the 'message read' acknowledgement), failing which we shall not be liable for any defect in, loss or damage to the Goods whenever and however arising. If you do not do so, you will have been deemed to have accepted the Goods. Time is of the essence for the purposes of this condition.

- 6.1.2 In the event of any valid complaint being notified to us within 72 hours after delivery or collection, and agreed by us in writing, you may reject such proportion of the Goods as is defective and we shall refund or credit to you in respect of the purchase price of such rejected Goods or replace the Goods at our discretion. We shall have no further liability to the customer in respect of those goods. Time is of the essence for the purposes of this condition.
- 6.1.3 Any Goods claimed to be defective shall be held by the customer in good, reasonable and proper conditions for a period of seven days or until collected by R W Walpole Ltd, whichever is the sooner.
- 6.1.4 Liability for any latent defects or latent diseases is specifically excluded under clause 5.2.2 of these terms. However we will at our absolute discretion refund the Contract price or replace Goods in the event that the Customer informs us of a genuine defect or disease which would have been present but not discoverable upon diligent inspection upon Delivery, provided such complaint is notified to us at Ivy Farm, Terrington St Clement, Kings Lynn, Norfolk PE34 4PX within 72 hours of the defect or disease becoming apparent, subsequently confirmed to us in writing within the next 48 hours either by post, fax or email (upon confirmation of the "message read" acknowledgment), and supported by a written opinion from a suitably qualified independent expert disclosed to the company not more than 10 days from the Company's receipt of notification of complaint. Where the Goods are to be stored following Delivery prior to planting, the customer shall take a representative sample of the Goods and plant them in an appropriate growing environment. Any complaint whatsoever must be notified to the company in writing either by post, fax or email (upon confirmation of the "message read" acknowledgment) to the company within 45 days of planting the sample. Time is of the essence for the purposes of this clause.
- 6.1.5 In the case of any complaint you shall disclose to the Company all records relating to storage of the Goods, any inspection records, records relating to the treatment of the Goods that were planted and any other relevant records whatsoever which relate to the treatment of the Goods following Delivery within 7 days of any request to do so. The Company reserves the right to withdraw any offer of refund or replacement if, in our reasonable opinion, the Goods have not been properly treated since Delivery.

## 7. Remedies

**The Company may at its discretion replace the defective Goods or refund the Contract price for the defective Goods (or such proportion of the Goods supplied as are defective) and in any event the liability of the Company shall be limited to the Contract price for the defective Goods.**

## 8. Quantity

- 8.1 Under no circumstances may you reject Goods for short delivery, and your remedy against the Company shall be limited to a rateable reduction in the Contract price or supply of the short quantity at the Company's election.
- 8.2 You shall not be entitled to reject the Goods where an excess has been delivered.

## 9. Risk

- 9.1 Risk of damage to or loss of the Goods shall pass from us to you:
- In the case of Goods to be delivered at our premises, at the time of collection by you or your agent
  - In the case of Goods to be delivered otherwise than at our premises the time when we have tendered delivery of the Goods (whether or not the Goods or any part of them are accepted).

## 10. Title

- 10.1 Notwithstanding the provisions of the Contract relating to Delivery, property in the Goods shall pass when you have paid in full the Contract price for these Goods.
- 10.2 In so far as the property in the Goods has not passed to you and you are in default of your payment obligations as set out in these Conditions, we may recover them and may enter your premises, or the premises of any third party where the Goods are situate, for that purpose, without prejudice to our other remedies.
- 10.3 As soon as reasonably practicable following Delivery you must label, map or otherwise record the location of all Goods supplied by us so that they are clearly identifiable as our property.

## 11. Cancellation

- 11.1 A binding Contract, as defined in 1.5, above, may not be cancelled by you unless agreed by R W Walpole Ltd in writing.
- 11.2 If all or any part of the Contract is cancelled, for any reason, then at our discretion we will be entitled to recover from you the price under the Contract of any and all Goods (finished or unfinished) that we may then hold or to which we are committed under the Contract.
- 11.3 We may suspend or cancel the Contract, by written notice if:

- 11.3.1 you fail to pay us any money when due, whether or not in relation to the Contract or any other contract you may have with us; or you become insolvent; or
  - 11.3.2 if you fail to honour your obligations under the Contract; or
  - 11.3.3 you do not collect or accept delivery of the Goods or any part of the Goods within a reasonable time following notification that the Goods or part of the Goods are ready for collection or delivery.
- 11.4 We may suspend, cancel or vary the Contract if some or all of the Goods ordered fail any relevant certification or test, or if we are otherwise of the reasonable view that the Goods are not of the requisite quality. In those circumstances we may, at our discretion, provide you with suitable similar alternative goods if you agree. However we shall not in any circumstances have any liability to you beyond refunding any part of the contract price already paid for the Goods in question.

## 12. Payment Terms

- 12.1 Payment is due at the date indicated on the invoice or as otherwise agreed by us in writing beforehand.
- 12.2 Where a 5% charge is added to an invoice this can be deducted for an invoice which is paid by the due date as set out on the invoice or otherwise agreed in writing by us. We reserve the right to charge interest at 5% above base on any invoice which is more than one month overdue.
- 12.3 The Company reserves the right to take payment in full prior to Delivery or collection of Goods with any first time customers or with any other customer at its discretion.

## 13. Non Payment

- 13.1 We reserve the right to withhold all deliveries until all outstanding payments due to R W Walpole Ltd have been received.
- 13.2 If you fail to pay us on the due date we may:
  - 13.2.1 claim fixed sum compensation from you under s.5A of the Late Payment of Commercial Debts (Interest) Act 1998.
  - 13.2.2 Recover (under clause 13.4) the cost of taking legal action to make you pay.
  - 13.2.3 Without prejudice to our retention of title to the Goods, take legal proceedings to recover the price of the Goods supplied but not paid for by the due date.
- 13.3 You do not have the right to set off any money you may claim from us against anything you may owe us.
- 13.4 You are to indemnify us in full and hold us harmless from all expenses and liabilities we may incur (directly or indirectly, including financial costs, including legal costs on a full indemnity basis and the cost of instructing a debt recovery agency to recover a debt due to us if any) following any breach by you of any of your obligations under these terms.

## 14. Return of Goods

- 14.1 We will accept the return of Goods from you only:
  - 14.1.1 with our prior agreement and written confirmation;
  - 14.1.2 on payment of an agreed handling charge (unless the Goods were defective when delivered); and
  - 14.1.3 where the Goods are as fit for sale on their return as they were on delivery.

## 15. Use of Plants and Licences/Consents

- 15.1 R W Walpole Ltd supplies Plants for the purpose of fruit production only. Any customer wishing to obtain parent stock for propagation should contact the Nuclear Stock Association Ltd, Bradbourne House, Stable Block, East Malling, Kent ME19 6DZ.
- 15.2 Any plants which are protected by EU or UK Plant Breeders Rights are designated in our catalogue and are supplied on the understanding that the material is for fruit production only. Propagation of protected plants for 'own use' or sale to third parties without a licence is illegal and can lead to legal action being taken against the infringer by the Head Licensees of the variety.
- 15.3 The purchase of Licensed Plants automatically confers the right of entry to the Head Licensee or his agent to the land or premises where the plants are situated.

## 16. Latest Delivery Dates

- 16.1 Due to the possible loss of vigour during cold storage in respect to strawberry plants and the detrimental effects of leaf break on the successful establishment of bare root raspberries, gooseberries and currants, latest delivery dates are quoted in our catalogue. Only in response to a customer's specific instructions and at our discretion will these goods (strawberry plants, raspberry cane, gooseberries and currants) be delivered after our recommended latest delivery dates. Such deliveries will be on the basis that the customer fully appreciates the risks and takes full responsibility for any failure of such stock to establish, grow and yield.

## 17. Waiver and Variations

- 17.1 No failure or delay by us in enforcing any of our rights shall constitute a waiver of any of our rights. No waiver shall be effective unless in writing and signed by us.
- 17.2 No variation of these terms is binding unless;
  - 17.2.1 made in writing
  - 17.2.2 signed on behalf of each party; and
  - 17.2.3 expressly stating an intention to vary these terms.
- 17.3 All orders that you place with us will be on these terms (or any that we may issue to replace them). By placing an order with us, you are expressly waiving any terms you may have to the extent that they are inconsistent with our terms.

## 18. Force Majeure

- 18.1 We shall have no liability whatsoever under, or in any way related to, the sale and purchase of the Goods or otherwise, whether in contract, tort (including negligence) or otherwise, for any failure to fulfil any obligation hereunder if and to the extent that such fulfilment is prevented by circumstances beyond our reasonable control which by its nature could not have been foreseen or was unavoidable including but not limited to failure of crops, failure of energy sources or transport network, breakdown of plant or machinery, strikes, lock-outs or other industrial dispute (whether or not involving the Company's own workforce) acts of god, war, terrorism, riots, civil commotion, interference by civil or military authorities, national or international calamity, armed conflict, malicious damage, nuclear, chemical or biological contamination, sonic boom, explosions, collapsed building structures, fires, floods, storms, earthquakes, loss at sea, epidemics or similar events, natural disasters or extreme adverse weather conditions or default of suppliers of subcontractors.

## 19. Law and Jurisdiction

- 19.1 These conditions shall be governed by and construed in accordance with the laws of England and you accept the jurisdiction of the courts of England for the purpose of trying any action arising out of the agreement.
- 19.2 If any provision of these Conditions is held by any competent authority to be invalid or unenforceable in whole or in part, the validity of these Conditions and the remainder of the provisions in question shall not be affected thereby.

## 20. General

- 20.1 Each right or remedy we have under the Contract is without prejudice to any other right or remedy we have whether under the Contract or not.
- 20.2 Failure or delay by us in enforcing or partially enforcing any provision of the Contract shall not be construed as a waiver of any of our rights under the contract.
- 20.3 The parties to the Contract do not intend that any term of the Contract shall be enforceable by virtue of the Contracts (Rights of Third Parties) Act 1999 by any person that is not a party to it.
- 20.4 All brochures, catalogues and other promotional materials are to be treated as illustrative only. Their contents form no part of any contract between us and you should not rely on them in entering into any contract with us.
- 20.5 If any Court or competent authority finds that any provision of the Contract (or any part of any provision) is invalid, illegal or unenforceable that provision or part-provision shall to the extent required, be deemed to be deleted and the validity and enforceability of the other provisions of the Contract shall not be affected.
  - 20.5.1 If any invalid, unenforceable or illegal provision of the contract would be valid, enforceable and legal if some part of it were deleted. The provisions shall apply with the minimum modification necessary to make it valid, legal and enforceable.

# Ordering and Deliveries

**Ordering - Tel: 01553 828829 Fax: 01553 827304**

The office is open from 8.30am to at least 5.15pm Monday to Friday.

**Michelle** michelle@rwwalpole.co.uk

**Jakub** jakub@rwwalpole.co.uk

**Sarah** sarah@rwwalpole.co.uk

**Jo** sales@rwwalpole.co.uk

## Plant Delivery

Let us know when you are ready - we will not send plants without prior notice from you. Transport is arranged to your requirements. We can use our vehicles, a contract carrier, or another service of your choice. Collection can also be made from Ivy Farm at a mutually convenient time.

## Pallet Rates

The majority of our customers' plants are despatched using the efficient next-day pallet delivery service provided by UK Pallets. As an approximate guide we can despatch 10,000 plants or 3,000 canes on each pallet using pallet boxes and can deliver to the whole of England except Cumbria and Cornwall and Devon for approximately £60 per pallet.

## Polish enquiries

For Polish sales enquires please contact Jakub.

**NB: Please check your consignment carefully before signing to confirm that they have been "received in good condition" otherwise we have no claim on our haulier's insurance if goods are damaged or delayed. If you have any problems with your plants, please contact us immediately.**
