Sometimes there's not enough room to say everything we'd like to about our fantastic range of plants, so we've introduced QR codes to give you instant access to our website and many other pages full of technical information. Look out for them and give them a try!

Just open the camera app on your smartphone and point it at the QR code, click the notification that appears and the information will load on your screen.

RW Walpole Ltd have supplied plants to PYO growers for more than 50 years and our portfolio of varieties includes a full range ideally suited to your needs. Our PYO selection has been compiled by Jeremy Darby and is based on his experience in the soft fruit industry as plant grower, supplier and advisor to growers in the UK over a 30+ year period. Jeremy has a worldwide reputation as a soft fruit agronomist and works regularly in western, central and eastern Europe (including The Black Sea and Caucasus regions), Central Asia and China, the Americas, the Middle East and East and Southern Africa.

Varieties we recommend for PYO growers must:

- Provide a good spread of season
- Be well adapted to growing in a range of soil types
- Have a high level of tolerance to the common diseases
- Have a good flavour
- Be easy to grow in traditional growing systems (e.g matted row for strawberries)

You can easily identify our recommended PYO varieties by looking out for the basket symbol throughout the catalogue

our quality products

The certification of plant stocks is essential for the supply of healthy plants and vitally important to fruit growers. The plants offered in this catalogue are grown under the rules of the new EU Fruit Plant Certification Scheme (FPCS). The EU scheme is administered in the UK by the NSA and run by the Animal and Plant Health Agency (APHA) who carry out extensive and independent inspections of all entered stocks.

FPCS - Certified Stock

Virus Tested Pedigree Mother Plants are produced by the Nuclear Stock Association (NSA) at East Malling by testing for all important viruses, pests and diseases using a full range of PCR and graft based tests. This Virus Indexed pre basic material is then used by commercial propagators to produce Basic (Grades 1 to 5) and Certified Plants.

FPCS - Approved Health

When a variety is first released and before pedigree material is available from the NSA we offer stocks that have been entered and inspected at the Approved Health Grade. This grade is part of the FPCS and uses the same criteria as the Certified Grade with regard to the health of the stocks but offers no safeguard with regards to trueness to type.

Plant Passport

When the stringent requirements of FPCS are not met, Raspberries and Strawberries are inspected once only by APHA against a much reduced set of criteria in order to meet the EU Plant Passport standard (CAC).

Charges added to each plant invoice

Strawberry FPCS Certification: £3.60/1000 plants

Raspberry FPCS Certification: £7.25/1000 canes

Paul Smith - Plant Health Inspection

strawberries | YOUR CHOICE OF PLANTS

This guide provides the key points for each type of plant, summarising the propagation method and application recommended.

Soil Grown - Bare Root Plants

Sold as fresh dug plants until December and then as graded frozen (frigo) plants ex cold-store January - June, these plants will carry a cold-store charge of £7.60 per thousand. Plants shipped after 30th June are supplied at the customers own risk.

A+ Plants

Graded by crown size these plants make up c.25-30% of the plant crop and, under favourable establishment conditions, give a commercial yield within 50-60 days of planting. Recommended for planting in soil from February to June.

A Grade Plants

Graded by crown diameter and representing the next 50% of the runner crop. A grade plants are ideal for planting in the soil and provide a low risk, low cost option of establishing a crop for a 2 or 3 year cropping cycle. These plants perform best when de-blossomed after planting.

A- Grade Plants

The smallest 20% of the runner crop. Ideal for use as a potted plant for subsequent sale.

Bare Root Grades - left to right: A-, A, A+, Waiting Bed

Waiting Bed Plants

The preferred option for maximising '50-60 day' fruit yields in both substrate and soil based growing systems. These plants are produced in a 'Waiting Bed', grown at a controlled density, and are runner cut in order to maximise crown size, truss numbers and flower counts. These plants are ideal for programmed cropping by specialist growers. Waiting Bed plants must be established under optimum conditions for rapid root development provided by short cycle, sprinkle irrigation in order to meet their full cropping potential. These plants will carry a cold-store charge of £2.90/1000/month for single crowns and £5.60/1000/month for double crowns from 1st February.

We offer Waiting Bed plants in two forms:

Double Cold-stored Waiting Beds (DCWB)

Double Cold-stored Waiting Beds are grown from an early planted A- frigo plant in order to produce the heaviest possible waiting bed with the highest yield potential in the year of planting. Available January - June.

Fresh Waiting Bed (FWB) - sourced

Fresh Waiting Beds are grown from summer dug fresh plants and offered as 'heavies' for planting from January to March and 'mediums' and 'lights' for planting from April to June.

Misted Tip Plants

Grown to order for delivery in late July/early August. Tips are easy to establish under light sprinkler irrigation, develop quickly and initiate high quality flower trusses with the potential to deliver a full crop of Class 1 fruit the next summer. *Available in the following varieties - Malling™ Centenary, Malling™ Allure, Vibrant and Elegance.* Please order by the end of June.

strawberries

Tray Plants

Double Cold-stored Tray Plants (DCTP)

Also termed Frigo Waiting Beds: grown from our own FPCS Certified cold-stored, small plants, planted into 250cc trays in March/April these produce multi crowned plants with high flower counts most suited to early planting to maximise yield.

Grown to order in a 50:50 mix of peat and coir. Tray plants maximise the truss and flower number in each plant allowing growers to plan their planting and cropping cycles to maximum effect. These plants will carry a cold-store charge of £4.80/1000/month for Mini Tray Plants and £7.00/1000/month for Heavy Tray Plants from 1st February.

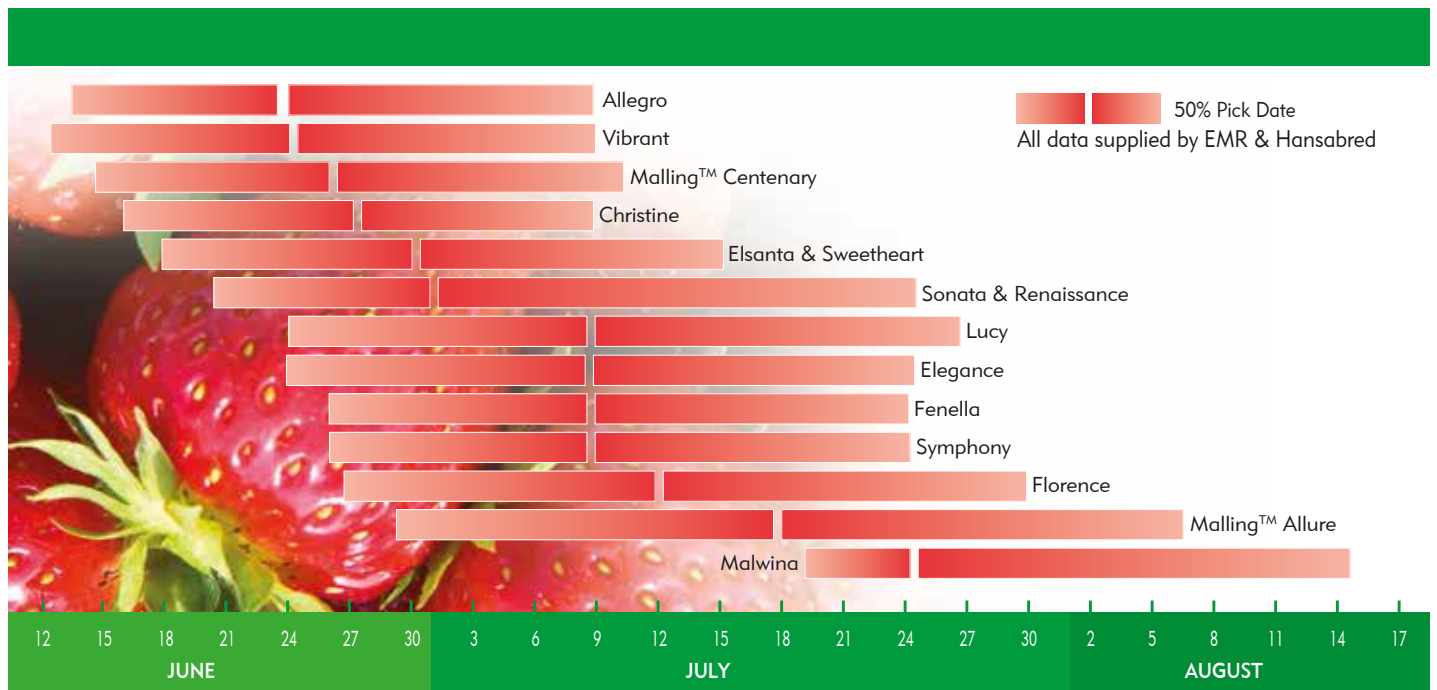

Available ex cold-store January - late June.

Fresh Tray Plants (FTP)

Large single crowned plants grown from fresh tips, struck in July. Suitable for long term storage.

picking periods for June bearing strawberries

strawberries | Kraege Tray Plants

Kraege International are located near the German town of Munster and growing their plants on the superb, black, organic sands of the area. The company has been built up to be one of the leading EU propagators by Stefan Kraege and is now ably run by Markus Staden.

Stefan Kraege

- In order to meet the specialist needs of large scale strawberry growers for top quality high yielding tray plants, RW Walpole Ltd & Kraege International have formalised an exclusive Agency Agreement from September 2022
- The sales teams from both companies will operate as a single office and work together to meet the requirements of growers and customers throughout the UK and Eire
- This collaboration enables us to offer some of the best tray plants available with the option to purchase plants grown from Kraege's specialist tip production facility in Morocco, and to extend our offer to include a range of everbearing varieties
- Combining dedicated cold storage facilities at RW Walpole Ltd with the excellent services of Nordfrost GmbH & Co.KG will deliver competitive freight rates and reduce delays
- Sales and logistics staff in both companies are experts in the 'post-Brexit' export/import process and will ensure there are no delays

Markus Staden

Malling™ Centenary | strawberries

Malling™ Centenary EU 40671

Bred by NIAB at East Malling and released in 2013, Malling™ Centenary has established itself as the most widely grown June bearing variety in the UK. A combination of superb fruit quality, excellent flavour, 98% Class 1 yields and phenomenal picking speeds has underpinned this variety's success.

- Large, regular shaped berries (62% > 35mm), a Class 1 percentage approaching 100 and excellent presentation effectively halve the picking costs of Malling™ Centenary compared to standard varieties
- The exceptional fruit quality is the result of the bright high gloss of the berries, the attractive regular shape, the sweet juicy flavour and the excellent skin and flesh firmness
- An early season variety with a 50% pick date some 5 days ahead of Sonata and with a more condensed picking season than Elsanta
- Class 1 yields are less than Sonata but Malling™ Centenary yielded 6.9kg/m, in the Proecentrum Hoogstraten Glasshouse Trial, comparable to the highest yielding varieties in that trial

- Greater understanding of the physiology of the variety has enabled propagation to improve the productivity of both Waiting Bed and Tray Plants
- Malling™ Centenary has limited resistance to soil born pathogens and a similar susceptibility to Crown Rot as Elsanta. Careful management of both water and fungicides when growing in substrate is essential
- The variety performs well in traditional, open field production and maintains its exceptional quality and enhanced picking speeds

Certified Stock: Price £/1000

strawberries | Early Season | Listed in order of cropping

Vibrant

Allegro EU 50976

- An exciting new variety strongly recommended for growers who are unable to rotate their strawberries or with endemic soil borne diseases
- Allegro is a vigorous variety with exceptional resistance to soil born diseases as well as Botyrtis and Mildew. No spring fertiliser required
- This early variety crops a few days ahead of Honeoye and carries its flowers underneath the left canopy which protects against late frosts. Berries are large, firm and bright with high sugar levels and excellent juicy flavour

CAC Stock: A- £214/1000 | A £270/1000 | A+ £405/1000

Vibrant EU 37422

- The beautifully shaped, uniform conic berries, medium to large in size, are a glossy brilliant red colour and are carried on strongly erect, long flowering peduncles
- Vibrant produces a high 60 day yield over an extended season by producing a large number of flowering trusses in succession, each with only 4 or 5 flowers, thus maintaining berry size
- This is a genuinely early variety with a 50% pick date 7 days ahead of Elsanta with exceptional picking speeds Moderately vigorous with good resistance to both Mildew and Crown Rot but susceptible to Verticillium Wilt

Allegro

Rendezvous EU PVR App. 2019/0144 

- A very early, large fruited high quality variety
- Bright red, glossy berries with exceptional shelf life and a pleasant, aromatic flavour
- Selected for unprotected, soil grown production
- Good disease resistance but control of Powdery Mildew is required when grown under protection

Approved Health: A- £214/1000 | A £270/1000 | A+ £405/1000

Malling™ Centenary EU 40671

See page 5

Christine 

- Vigorous early variety
- The orange-red berries are firm and flavour is good
- Christine is the only early variety with really good resistance to Verticillium Wilt and will give three full crops when grown as a traditional matted row. The variety performs well under fleece
- Recommended for PYO production

Certified Stock: A- £180/1000 | A £225/1000 | A+ £360/1000

Honeoye

- Established early variety with the same season as Christine
- Susceptible to Verticillium Wilt

Certified Stock: A- £180/1000 | A £225/1000 | A+ £360/1000

Korona 

- Recommended for PYO growers in response to the variety's combination of flavour, season and disease resistance

Approved Health: A £225/1000

Glorielle EU PVR App. 2019/1746 

- The first variety to be released from Stefan Kraege's personal breeding programme. Glorielle was selected in response to its exceptional performance when soil grown without protection
- Bright, glossy evenly shaped berries which maintain their size throughout the harvest period and deliver a high percentage of good flavoured Class 1 fruits
- The variety blossoms underneath the leaf canopy offering protection against late frosts
- Available as a cold stored plant from March 2023 onwards

CAC Stock: A- £214/1000 | A £270/1000 | A+ £405/1000

strawberries | Main Season | Listed in order of cropping

Sweetheart

Royal Sovereign

- Bred in 1892 this variety has a reputation for fruit quality and flavour and was the most widely grown variety in the UK for forty years from 1920 until 1960
- It has an enthusiastic following with knowledgeable gardeners

Certified Stock: A £360/1000

Sweetheart EU 34842

- This second early season selection can be very successfully grown under a traditional, low cost, production system
- The large, attractive, glossy conic berries have superb visual appeal and an excellent flavour
- Yields in excess of 6 tons/acre, have been achieved commercially on our own farm. 60 day yields are modest
- Sweetheart has reasonable resistance to both Powdery Mildew and Verticillium Wilt

Certified Stock: A- £203/1000 | A £260/1000 | A+ £395/1000

Marshmello

- A second early season variety producing strong, vigorous, large crowned plants
- Selected in response to its superb flavour this variety has become a favourite of the PYO industry. Excellent disease resistance

Certified Stock: A £265/1000 | A+ £400/1000

Elsanta

- Good fruit quality and an excellent shelf-life
- The medium to large, firm orange-red berries are susceptible to fruit splitting and have a tendency to produce misshapen fruit leading to a low percentage Class 1
- Susceptible to Two Spotted Mite, Powdery Mildew and Verticillium Wilt
- A+ plants graded at a minimum crown diameter of 15mm

Certified Stock: A- £191/1000 | A £250/1000 | A+ £395/1000 | Waiting Beds: POA

Renaissance EU 51391

- A high yielding mid season selection with medium sized, shiny red, glossy, heart shaped berries
- Richly aromatic and with a high sugar to acid ratio gives Renaissance a superb and unique flavour
- Excellent vigour and disease resistance makes this variety well suited to traditional matted row culture and suitable for PYO

Approved Health: A- £214/1000 | A £270/1000 | A+ £405/1000

Sonata *EU 14768*

- A high yielding selection with a high percentage of Class 1. Attractive, bright, uniform conical berries. Productive as a Waiting Bed
- Sonata is less susceptible than Elsanta to splitting but is more sensitive to bruising, especially in hot weather
- Five days later than Elsanta. A+ plants graded at a minimum crown diameter of 14mm

Certified Stock: A- £203/1000 | A £260/1000 | A+ £395/1000

Waiting Beds: POA

Eros

- Large, attractive berries, mid-red in colour with a bright glossy skin
- This mid season variety has an excellent flavour
- Eros is resistant to Red Core and has some tolerance to Verticillium Wilt
- A popular PYO variety

Certified Stock: A £225/1000 | A+ £360/1000

Hapil

- A large vigorous plant producing heavy crops of bright, glossy, somewhat soft, mid-season berries
- The size, flavour and appearance of the fruit appeal to the PYO customer
- Susceptible to Verticillium Wilt

Certified Stock: A £225/1000

Cambridge Favourite 

- Bred in 1938 Cambridge Favourite is an exceptional dessert and processing variety with national recognition
- Excellent disease resistance and a vigorous free running habit makes this an easily grown variety that crops heavily and reliably under a wide range of conditions

Certified Stock: A- £180/1000 | A £225/1000

Pegasus 

- Attractive, well presented and pleasantly flavoured berries but less firm and with softer flesh than modern berries
- Good all round disease resistance and usefully tolerant to Verticillium Wilt
- Still useful as a general purpose PYO variety

Certified Stock: A- £180/1000 | A £225/1000

Red Gauntlet

- 'Heritage' variety with Red Core resistance
- A high yielding variety producing a second crop of fruit in September

Approved Health: A £225/1000

Lucy *EU 32752*

- Ideal for low cost, unprotected production systems
- 5 days later than Sonata, Lucy produces large, attractive, mid-red glossy berries, 80% of which exceed 35mm
- The berries hold exceptionally well on the plant and withstand heavy rain
- Lucy has good resistance to Crown Rot but is susceptible to both Verticillium Wilt and Mildew

Certified Stock: A £260/1000

Sonata

strawberries | Main - Late Season | Listed in order of cropping

Elegance EU 32070

- Bright and beautifully glossy berries combined with an exceptional shelf-life are the features of this popular variety
- Elegance has a sweet strawberry flavour with a pleasant juicy texture when soil grown
- The berries are well displayed with a high percentage of Class 1 and have little susceptibility to finger bruising
- 60-day and maincrop yields are excellent. Susceptible to Mildew with some tolerance to Verticillium Wilt and Crown Rot

Certified Stock: Price £/1000				
Graded			Waiting Bed (DCWB)	
A-	A	A+	Single Crown	Double Crown

* Plus cold storage charges from 1st February

Late Season

Fenella EU 32669

- Bred by NIAB at East Malling, Fenella is a high yielding, high quality, late season variety with excellent disease and weather resistance
- The berries are large, firm and glossy with a waxy skin, orange-red in colour and with an excellent and distinctive sweet flavour
- This vigorous plant has a good resistance to Crown Rot and Verticillium Wilt and performed well in both extremely wet and hot seasons
- Rain tolerance allows for the reliable production of good quality, lowcost, unprotected fruit over a wide geographical range

Certified Stock: A- £203/1000 | A £260/1000 | A+ £395/1000

Cupid EU 37423

- Late season selection cropping at the same time as Florence
- The only variety available with resistance to Verticillium Wilt, Crown Rot, Black Spot and Powdery Mildew
- Attractive, uniform, conic berries with good skin strength and shelf-life

Certified Stock: A £260/1000

Symphony EU 1713

- Bred by JHI in Scotland this is a well established late season variety
- The berries are bright, regular and glossy with good flesh and skin strength and a pleasant, somewhat acidic, flavour
- Symphony has the potential for very high yields and has field resistance to Red Core and is suited to low cost, outdoor production

Certified Stock: A- £203/1000 | A £260/1000 | A+ £395/1000

Florence EU 7386

- Florence has a prolonged picking season
- The berries are consistently large, sweet and with a particularly good flavour but darken when overripe
- Resistant to Crown Rot and most leaf diseases and with tolerance to Verticillium Wilt

Certified Stock: A- £203/1000 | A £260/1000 | A+ £395/1000

Malling™ Allure EU 58315

- Cropping at the same time as Florence, Malling™ Allure delivers a brightly coloured crop of large berries (92% > 35mm) with superb quality, a high Brix and excellent flavour
- A robust, vigorous plant with some resistance to Mildew but is moderately susceptible to both Crown Rot and Verticillium Wilt
- Malling™ Allure complements the highly successful Malling™ Centenary by matching its fruit quality but with a 14 day later season

Certified Stock: Price £/1000					
Graded			Waiting Bed (DCWB)		Trays (FTP)
A- (8-10mm)	A (10-11mm)	A+ (11mm)	Single Crown	Double Crown	Fresh
208	270	405	440	540	652

* Plus cold storage charges from 1st February

Malwina EU 24376 

- This very late season variety has proved extremely useful to PYO growers. With a start date and 50% pick date some 12 days later than Florence, Malwina has profitably extended the season wherever it has been planted
- The variety is very vigorous and the short fruiting pedicels tend to hide the fruit within the foliage. Malwina is self-fertile but yields are some 15% less than Elsanta
- The dark red, glossy berries are firm, red fleshed with a lovely sweet aroma, exceptionally high Brix readings, and with an excellent flavour
- The berries are large, with over 85% of the crop exceeding 35mm
- Any application of nitrogen has to be carefully managed to avoid excessive vegetative growth
- Malwina is resistant to Mildew, tolerant to Verticillium Wilt and Red Core but is susceptible to Crown Rot. Blossom Weevil and Thrip control should be aligned to the late flowering period. The variety withstands heavy rain
- Please note that approximately 3% of fruits exhibit Phyllody, whereby small leaves emerge from the fruit. This defect is stable and does not spread

N.B. Look out for Blossom Weevil due to late flowering

Certified Stock: A- £214/1000 | A £281/1000 | A+ £416/1000

strawberries | everbearers

Malling™ Champion EU 58314

- Early season everbearer with a peak harvest in July and steady production throughout August
- High yielding variety, frequently exceeding 1000gms/plant in trials and produced a large, early 60 day crop when planted as a tray plant
- 62% of berries exceeded 32mm in size and a Class1 percentage of 88%
- Attractive, conic shaped berries have a good skin firmness and a pleasantly sweet flavour
- Well displayed fruit on long trusses ensure fast and economical picking with a good shelf life
- Malling™ Champion is resistant to Crown Rot and Verticillium Wilt and has moderate resistance to Powdery Mildew. Extremely tolerant to wind and rain damage
- *Heavy Tray Plants (250 cell) - July struck tips grown under protection for January planting. Heavy crop in mid May and then through to October.*
- *Mini Tray Plants (135 cell) - Smaller and more economical plant. Smaller spring crop, bulk of production during July - October. Plant by mid May*

Certified Stock: Heavy Tray Plant: £625/1000

Mini Tray Plant: £540/1000

Malling™ Ace EU PVR App. No: 2020/2580

NEW! - An exciting new everbearer from NIAB East Malling

- Large, uniform, conic berries, indistinguishable from Malling™ Centenary in appearance and giving an exceptional Class 1 grade out and phenomenal picking speeds
- Trial yields in excess of 1.5kg per plant have been regularly recorded using 250cc tray plants
- Good tolerance to Crown Rot (Phytophthora Cactorum) but a Powdery Mildew control programme is essential
- Scan the QR code for our detailed technical leaflet

Certified Stock: Mini Tray Plants POA - ORDER FOR SPRING 2024

Malling™ Ace yield for various plant types and different plant densities, on tunnelled table-top production in different UK trial sites (2020)

Trial Location	Plant type	Planting density (plants/m)	Total yield (kg/plant)	Class 1 yield (kg/plant)	Class 1 %	Class 1 yield (kg/m)	Mean berry weight (g)
1	130cc	5	1.7	1.6	93	7.8	27.2
1	250cc	5	1.7	1.6	92	7.9	24.6
2	250cc	8	1.2	1.2	98	9.7	27.5
2	90cc	8	1.2	1.2	97	9.2	30.7

Finesse EU 34837

- Medium to large, heart shaped berries with attractive bright red colour, a waxy finish and with good skin strength and shelf-life
- The berries have a pleasant juicy texture, the flavour is well balanced between acid and sugar and brix levels have averaged 9.5 in trials
- Plant vigour is good and runner production limited
- 50% of the berries exceed 35mm in trials with a yield potential in excess of 1.2kg per plant
- Good resistance to Crown Rot and Verticillium Wilt
- Finesse has excelled when grown into the soil and when second-hand substrate has been used

Certified Stock: 40 Cell Mini-Tray Plants: £484/1000

Malling™ Opal

- Early season everbearer cropping heavily in July & August
- This variety produces large, attractive, conical berries with an excellent sweet flavour and juicy texture
- Fruit presentation is superb and fruit firmness and shelf life are both good
- Moderate resistance to Powdery Mildew and Botrytis

Certified Stock: A £345/1000 | Spring Potted Plants: £484/1000

Flamenco EU 14769 

- Widely grown and popular variety for PYO
- The attractive berries are medium to large in size. Consistently uniform and conical in shape with a glossy orange-red colour.
- Picking commences in late July and peak production occurs in September
- The variety has good resistance to Verticillium Wilt and performs well when grown in soil

Certified Stock: A £345/1000 | Spring Potted Plants: £484/1000

Finesse

Malling Opal

raspberries | YOUR CHOICE OF PLANTS

Standard Cane

- Field grown on our Norfolk Farms
- Inspected to Basic, Certified and AH standards
- Fresh lifted November - January
- February - May delivery ex cold-store at £17.50/1000 surcharge. Plants shipped after 31st May are supplied at the customers own risk
- Reliable and traditional method of establishment

Spring Potted Plants

- Certified Stock in 40 cell units
- Available end April - mid June. Order by mid January latest
- Available in the following varieties - Glen Mor, Malling™ Bella, Malling™ Charm, Enrosadira & Paris

Raspberry Roots - *For your convenience!*

- Field grown in Norfolk
- Inspected to Basic, Certified or AH standard
- All root is washed, cold-stored at -2°C and supplied in units of 8kgs
- Easy to handle and suitable for long distance shipping
- Available from January to June
- Suitable for planting in soil or substrate

primocane | raspberries

Two newly available selections from the NIAB Breeding Programme. Orders under 5000 plants can be supplied against a plant royalty and a signed propagation contract

Malling™ Bella EU 55731

- Mid season primocane
- Large (7gm) well presented berries that maintain their size through the seasons, keeping picking costs to a minimum
- Bright, attractive mid-red fruit with excellent shelf life and flavour
- Malling™ Bella has very productive and vigorous upright canes
- The variety crops from late July through to the end of October
- Suitable for double cropping and warmer climate
- Listed by the following supermarkets - Tesco, Waitrose, Sainsburys, Morrisons and Aldi

Certified Stock: Spring Potted Plants: £1050/1000

N.B. Please order by mid January to ensure availability

Malling™ Charm EU 55732

- Early season primocane - Capable of picking from early July when grown under protection
- Large (6.7gm) well presented and easily picked berries carried on upright canes
- Attractive, pale coloured bright fruit with excellent eating characteristics
- Neat, compact and easily managed habit
- Trial yields of over 900gms per pot make this an attractive option for well managed direct sale units
- Not suited to double cropping and performs best in cooler climate
- Only listed by Sainsburys at the time of going to print

Certified Stock: Spring Potted Plants: £1050/1000

N.B. Please order by mid January to ensure availability

LICENCING ARRANGEMENTS - Please note for these varieties a grower non propagation agreement will be required

raspberries | primocane

Enrosadira EU 48949

- Early season
- Attractive, large, bright red conically shaped berries of high quality
- Easily picked, firm fruit with a good aromatic flavour and very good shelf-life
- Vigorous selection with short laterals and small spines
- Highly productive when cropped as a primocane and florican
- Enrosadira is the most promising primocane to be launched in the last few years and is being rapidly adopted commercially throughout Western Europe

Paris EU 43223

- A very productive, high yielding quality selection with bright and attractively shaped berries
- Highly rated for flavour and eating quality due to its excellent aromatic flavour, firm fruit and excellent shelf-life
- Very large and well presented fruit help to minimise picking costs
- The vigorous canes are largely self supporting with strong short laterals
- Late season primocane, 15 days later than Polka
- Our experience with this variety suggests that it has no undue susceptibility to pests or diseases

Versailles EU 43224

- Very large berries up to 12gms with a bright attractive colour. The firm fruits hold well on the plant with a good shelf life
- Excellent eating qualities with a good sugar/acid balance
- Mid season, 7-10 days later than Polka
- Vigorous, easily managed thorn free canes producing fruit on very short laterals which is quick and easy to pick

IMPORTANT NOTE

All of these very interesting selections are available to growers throughout the EU without restrictions. They carry a substantial royalty per plant when purchased but other than a standard non-propagation agreement the grower needs no special licence nor incurs any further costs.

primocane | raspberries

Joan J *EU 10236*

- Joan J crops early and commences picking at the end of July and crops for a seven week season
- Berries are typically 6gms in early picks and decline slightly to 5gms later in the season. Overall yield is excellent
- The flavour is exceptional and the berries have a pleasing fleshy texture when eaten. The berries freeze well and jam made with this variety is outstanding
- Fruit colour is slightly dark on the cane and darkens further after picking. Daily harvesting is recommended
- The canes are stout, spine-free and numerous, their growth is vigorous, tall and erect
- Joan J is justifiably a great favourite with knowledgeable amateur growers and the PYO industry

Certified Stock: Standard Cane: £968/1000 | Root: £22.50/kg

Polka *EU 14918*

- Bred by Dr. Jan Danek at the Fruit Experimental Station, Brzezna, Poland
- This extremely reliable and productive variety is the most widely grown primocane throughout the whole of Europe
- Excellent disease resistance
- A very productive and early season variety producing large (6.6gms), evenly conical berries with excellent flavour
- Firm berries with good shelf-life but darken after picking
- Crops when grown without protection from late July through to the first frosts
- Vigorous, upright habit
- Along with Joan J, Polka is our preferred variety for low cost outdoor production

Certified Stock: Standard Cane: £968/1000 | Root: £25/kg

raspberries | primocane

Raspberry Production Field, Narborough

Autumn Bliss

- Cropping from the end of July until the first frosts of autumn this variety produces medium sized berries, (typically 3.3gms) with a pleasant flavour
- The short erect, strong canes only need a minimum of support. Limited to amateur use

Certified Stock: Standard Cane: £895/1000 | Root: £20/kg

Heritage

- Aply named older variety with lovely juicy berries, a characteristic flavour and strong aroma
- A mid season primocane fruiting from August to Autumn. Self supporting with strong upright canes. Limited to amateur use

Approved Health: Standard Cane: £895/1000 | Root: £20/kg

Allgold

Autumn Treasure EU 32811

- A good quality mid-season primocane from NIAB at East Malling producing very attractive, bright, cohesive berries of 3.5gms to 5gms, and with a 50% pick date in late August
- The canes are strongly erect and spine free.
- Strongly resistant to Root Rot, Verticillium Wilt and Powdery Mildew
- Recommended for organic and low input growing systems

Certified Stock: Standard Cane: £968/1000 | Root: £22.50/kg

Allgold

- A yellow fruited primocane variety with a similar season, habit and cropping potential to Autumn Bliss
- The fruit is strongly coloured with a distinct flavour which is sweeter and superior to that of Autumn Bliss although the berries are not as firm
- Allgold is slightly thorny but tough and vigorous

Approved Health: Standard Cane: £1125/1000

NEW FROM JAMES HUTTON

Glen Mor EU PVR App No. 2019/2569 

“An early season, high yielding, high quality variety with bomb-proof resistance to Raspberry Root Rot. Glen Mor will be a game changing variety for many of our PYO Growers” - Jeremy Darby

Glen Mor is the result of a floricane and primocane cross and carries benefits from both plant types including a low chill requirement and an autumn tip crop of fruit

- Early season variety picking nine days ahead of Glen Ample and cropping over an extended 5-6 week period
- Robust, firm, large berries (5.9gm mean weight) which detach easily and maintain their size over the season
- Superbly flavoured berries with high brix (9.7) a fantastic shelf life and yields superior to those of Glen Ample and Glen Carron
- Glen Mor has a very low winter chill requirement ensuring reliable bud break even following the mildest winters
- Spine free, straight canes with short internode length and excellent bud break
- The Rub118b gene marker confers resistance to Raspberry Root Rot and has been successfully trialled over six years in infected and flooded soil at James Hutton Ltd
- Glen Mor has had good feedback on yield and size and superb retailer feedback for flavour.
- **Please order by mid January for spring 2023 delivery**

This will be an important addition to PYO sites growing in soil with a

Certified Stock: Spring Potted Plants: 40 cell: £1915/1000

LICENCING ARRANGEMENTS

This variety is protected by EU Plant Variety Rights and a completed grower non propagation agreement will be required at the time of ordering.

ORDER NOW - demand is strong!

Available as plug plants May/June 2023 & potted long cane from December 2023

For successful establishment from plug plants:

- Prepare a deep tilth, free of perennial weeds
- Immediately before planting, water the plug plants and the soil
- Ensure that the top of the plug is covered by 1cm of soil to prevent drying

raspberries | Early Season | floricanne | Listed in order of cropping

Malling Juno EU 45409

- Bred at NIAB East Malling. Malling Juno is a very early season selection
- Picking commences at the same time as Glen Moy but the condensed season gives a 50% pick date five days earlier
- Firm, medium to large, cohesive berries. Attractive mid-red colour similar to Glen Ample with a good, sweet flavour
- Well presented and quickly picked berries with very strong skin and a firm texture
- Spine-free, reasonably vigorous, easily handled cane. Laterals are of medium length and strongly attached
- Good disease resistance but susceptible to Raspberry Root Rot
- A very early and even bud break suggests that Malling Juno has potential for early, protected cropping

Certified Stock: Standard Cane: £968/1000 | Root: £22.50/kg

Glen Mor EU PVR App No. 2019/2569

See page 19

Malling Minerva

- A high yielding reliable variety that crops one week ahead of Glen Ample and produces well presented berries with an even and attractive conical shape
- Spine-free with an easily managed, compact habit, susceptible to Root Rot

Approved Health: Standard Cane: £895/1000 | Root: £22.50/kg

Glen Fyne EU 27262

- Firm, bright, attractively coloured aromatic berries picked over a long season
- Moderately vigorous and spine free canes with strongly attached fruiting laterals
- Glen Fyne is susceptible to Phytophthora Root Rot, so needs to be grown on sites where this disease is not present, or in pots with substrate where irrigation water is free of this disease

Certified Stock: Standard Cane: £968/1000 | Root: £25/kg

Malling Promise

- An early season variety with large, firm, rosy red berries with excellent flavour which account for the continued interest in this variety
- Excellent pest and disease resistance and a tolerance of poor soils make this a valued variety with gardeners
- Outclassed for commercial use

Approved Health: Standard Cane: £895/1000 | Root: £25/kg

Glen Carron EU 49479 

- Glen Carron is an early to mid-season selection cropping over a four week period
- The high quality, large berries are consistently larger than Tulameen at 5.4gms, bright red, and with a high gloss and a high Class 1 percentage. The berries are long, conic in shape, well presented and pick and plug easily; they are very sweet (11.8 Brix) with a low level of acidity. The berries have good shipping characteristics and have outstanding shelflife
- The variety is vigorous, producing a good show of strong, spine-free canes
- The fruit is well displayed with strong laterals
- Resistant to Cane Botrytis, Spur Blight and Raspberry Aphid
- Glen Carron has a high chill requirement (minimum 1200 hours)

Glen Ample EU 2729

Glen Ample, bred by JHI in Scotland, is the most widely grown floricane in the UK and much of Northern Europe. This versatile cultivator consistently produces a high yield of large, high quality fruit.

- A mid-season, vigorous, spine-free variety producing consistently high yields of 7-10 tonnes/hectare
- Glen Ample produces large, fleshy berries of 4gms to 6gms, round conical in shape and attractively bright red in colour
- The berries are firm with a pleasant aromatic and sweet flavour
- The fruit holds well on the cane and has excellent shelf-life
- Spawn production is prolific and vigorous, fruiting laterals are of medium length and upright presenting the fruit well
- Resistant to the large Raspberry Aphid but susceptible to Root Rot, Spur Bright and Cane Rust

Certified Stock: Standard Cane: £928/1000

Root: £20/kg

Certified Stock: Standard Cane: £968/1000

Spring Potted Plants: 40 cell: £1035/1000

raspberries | Main - Late Season | floricanne | Listed in order of cropping

Glen Prosen

- This long established spine free selection is still valued as a reliable variety for the amateur growers. Firm, high quality, easily picked berries are typical of this variety
- This variety is now outclassed for commercial production

Approved Health: Standard Cane: £895/1000

Tulameen Pearl

- An improved strain of the popular variety Tulameen which delivers a higher yield and beautifully formed berries with fine droplets
- Mid-season variety with a long harvest promised. Attractive, large, glossy berries with a firm texture and superb flavour
- A strong, vigorous variety producing canes in excess of two metres and with few spines. Susceptible to Root Rot

Certified Stock: Standard Cane: £895/1000

Cascade Delight

- This high yielding variety produces large, glossy berries (5gms), long, conic in shape, easily detached and with excellent flavour.
- The variety has a similar season to Tulameen picked over a 46 day period in a recent AHDB Trial
- Cascade Delight is vigorous, strongly upright and slightly spined, with most of the spines located on the base part of the cane. Long fruiting laterals need support
- This variety's strong field resistance to Raspberry Root Rot makes it an automatic choice for many growers whose choice of site is limited

Certified Stock: Standard Cane: £895/1000 | Root: £20/kg

Glen Dee

LATE SEASON

Glen Dee EU 49182

- Glen Dee produces consistently large (6.2gms), pale pink-red berries, conical in shape and with a sweet raspberry flavour, a slight acid bite and a creamy texture.
- This high yielding late season variety produces berries that are easily and economically picked, firm and with outstanding shelf-life
- Spawn production is vigorous and prolific with a strong upright habit. The variety has a tendency to break a small percentage of it's buds under warm early winter conditions and can be slow to establish in some seasons
- Susceptible to Root Rot and needs to be protected by routine application of fungicide and grown in substrate. Ensure that Raspberry Beetle controls coincide with flowering

Certified Stock: Standard Cane: £968/1000 | Root: £22.50/kg

Octavia EU 14919

- Bred at NIAB East Malling, Octavia is the latest cropping floricane available with a 50% pick date consistently 12 days later than Glen Ample
- The berries are large, averaging over 5gms in trials, uniform, firm and easily detached. The flavour is pleasant and the colour good, if a little dull some seasons
- The fruit has an excellent shelf-life
- Octavia is a moderately vigorous, thorny variety producing strongly upright canes with well presented fruit and with excellent yield potential.
- Susceptible to Root Rot but resistant to Cane Botrytis and Cane Spot
- Octavia has exceptional winter hardiness and survived -30°C in Poland
- Octavia's late season bridges the gap between the floricane raspberries and the earliest primocanes providing a continuity of fruit

Octavia

Certified Stock: Standard Cane: £968/1000 | Root: £22.50/kg

picking periods for main season raspberries

blackberries | Listed in order of cropping

Plants are raised almost exclusively by means of leaf bud cuttings and are grown for the first season in 9cm pots. Two year old plants are offered for sale in 2 litre pots.

Early Season

Obsidian EU 15761

- Very early, vigorous variety with large, firm berries that retain their excellent colour when refrigerated or frozen. High yielding with a condensed season

Karaka Black EU 10720

- Large, long cylindrical berries of 10 to 11gms, firm and with dark black shiny appearance, mild flavour and excellent shelf-life
- Picking commences in early July and extends over a long fruiting season until mid-August. Karaka Black has a moderately vigorous thorny trailing habit

Black Butte

- Exceptionally large berries, up to 5cm in length which are firm and attractively coloured and well flavoured
- This variety has thorny, trailing vines and ripens mid July

Loch Tay EU 16917

- The berries are 4.5 to 5gms in weight, firm, uniformly round, with a rich black glossy appearance. The flavour is superb and have an excellent shelf-life
- Loch Tay is not as susceptible to Red Berry Mite as other varieties and is resistant to Purple Blotch
- The variety has a semi-erect spine-free habit similar to Loch Ness but with improved vigour. Pre-Basic mother plants supplied by JHI

Loch Maree EU 34751

- This high yielding, thorn free variety produces moderately firm berries
- Attractively coloured pink double blossoms make this variety an obvious choice for the gardeners

R W Walpole's commercial plantation of Loch Tay

Mid Season

Asterina® 1025859

- Asterina® produces very large, bright and shiny berries with an excellent blackberry aroma and an exceptional flavour
- Picking commences in mid-July and extends over a prolonged period. This vigorous, thornless, upright variety is recommended for both PYO and amateur use

Loch Ness

- Picking commences in mid-July and normally extends until mid-October in England
- The berries are large, typically 5 to 6gms, very firm with a rich glossy black colour. The flavour develops as fruit ripens. Shelf-life is excellent
- Loch Ness has good resistance to Purple Blotch and Botrytris but is susceptible to Downy Mildew which needs to be controlled on a regular basis
- Recommended planting distances vary from 1.25m to 2.0m depending on soil fertility and the availability of irrigation
- This variety produces strongly erect canes that can be tip pruned when the primocane reaches the top wire
- Loch Ness has excellent winter hardiness and can be successfully grown under a wide range of challenging climatic conditions

Chester

Loch Tay

Asterina®

Karaka Black

Late Season

Chester

- A high quality late season variety picking from late July until the first frosts
- Well presented shiny blackberries of 5 to 6gms with an attractive flavour, good shelf-life
- Chester is a very heavy yielding variety and in our experience thrives on heavy, non-irrigated soil
- Vigorous, semi-erect, thornless canes with good disease resistance to Downy Mildew and Purple Blotch
- Recommended for PYO production

Triple Crown

- A semi-erect, spine-free, late season variety that crops from mid-August to the first frosts
- The berries are larger than those of Chester at 6.5gms but somewhat better
- The berries have a bright, shiny appearance, excellent shelf life and an excellent flavour

CAC Potted Plants	Price £/100	
	9cm Pots	2 Litre Pots

hybridberries

Buckingham Tayberry 🛒

- A thornfree variant of the original Scottish bred Tayberry. Large, deliciously sweet, aromatic fruit, ripening during July & August
- Strong canes, a high yield and uniquely flavoured fruit make this a very attractive and rewarding plant

Loganberry

- A superior, thornless, variant of the original Loganberry hybrid that was identified in 1881
- Ripening from mid July the large, distinctly coloured and flavoured berries crop until the end of August. The berries are soft but are valued by PYO customers and amateur gardeners

Tummelberry

- Producing very attractive, large, rounded fruit with a bright red colour and superb flavour. Yield, vigour and winter hardiness are all good
- Picking commences one week later than Tayberry and continues until the end of August

Tayberry

- Bred by JHI, Tayberry produces consistently higher yields than Loganberry. The fruit is large, up to 5cm in length, deep red with an excellent flavour
- Cropping season is from early July through to mid-August. A popular choice for the PYO grower

Boysenberry

- A thornless hybrid producing a high yield of large, round, purplish black berries
- With a taste like that of wild sweet blackberries, Boysenberries make an interesting addition to any garden or PYO farm

CAC Grade all varieties: 9cm pots: £250/100 | 2L pots: £500/100

Blackcurrants

CULINARY VARIETIES

Ben Connan

- The most popular early season culinary variety carries high yields in excess of 4kg per bush. The large berries, carried on strigs of medium length, have a good sharp flavour
- Resistant to Leaf Curling Midge, Mildew and Leaf Spot

Ben Sarek

- An early cropping, high yielding variety producing well flavoured large berries
- Neat, compact bushes, rarely more than 1m in height and resistance to both frost and Mildew add to Ben Sarek's appeal

Ben Alder

- A very high yielding late season variety
- Small to medium sized berries with a high colour stability making this perfect for juice and wine

SPECIALIST DESSERT VARIETY

Ebony

- Very large, superbly flavoured sweet berries (15% Brix) make Ebony a genuine dessert blackcurrant
- Ripening in early July, two weeks ahead of Ben Connan. Ebony is moderately vigorous with an open spreading habit. Resistant to Mildew. Protect against Gall Mite

CAC 2yr Bushes	Price £/100
Ebony	380
Ben Connan, Ben Sarek & Ben Alder	348
Junifer, Jonkheer Van Tets, Rovada & Blanka	330

All bare root bushes will incur cold-store charges of £14.50/1000 from 1st February

Also available as 2L potted plants, see page 33 for prices

Redcurrants

Junifer

- A very high yielding, very early selection from France. Junifer produces easily picked, good quality fruit commencing in early July. This variety crops heavily on the first year wood giving a good yield immediately after planting

Jonkheer van Tets

- A vigorous, upright bush which flowers early and produces long trusses of large, deep-red berries. This variety crops during the second half of July

Rovada

- This late variety is now by far the most widely planted cultivar due to its high yields of superb quality fruit. Long strigs, large berries and a bright, attractive appearance make this the most outstanding variety currently available

Whitecurrants

Blanka

- The highest yielding whitecurrant in trials in Holland, Blanka produced in excess of 4kg/m² of fruit. Large berries and long trusses add to the attractiveness of this August fruiting variety

Ebony

Rovada

gooseberries

Early Season

XENIA[®], var., Rafzuera' - featured variety

- Described as one of the best new gooseberries available
- Xenia has a strong, upright growing habit and is almost spineless
- This early season variety is high yielding and produces pink, smoothed skinned, sweet tasting berries with an exceptional flavour
- Excellent mildew resistance

Invicta

- Vigorous, high yielding variety with large, oval, smooth skinned berries that ripen to a pale green colour with excellent flavour
- Growth is vigorous, spreading and thorny and the variety rapidly reaches its full yield potential. Some resistance to Mildew but susceptible to Phytophthora

Mid Season

Hinnonmaki Red

- A mid-season, hardy variety producing a heavy crop of medium sized dark red fruit on a semi-upright bush
- Flavour of the berries is excellent - the skin is tangy and the inside is sweet. Also resistant to Mildew

Pax EU 4561

- Virtually spine-free dessert variety producing dark red fruit of medium size (7.4gms) with a good flavour and a yield potential in excess of 1.5kg per bush
- Vigorous and spreading with occasional spines on young wood. Resistant to Mildew and Leaf Spot

Late Season

Captivator

- A virtually spine-free, red fruited variety with a vigorous spreading habit and producing sweet, burgundy red pear-shaped berries in late July
- Mildew resistant and highly recommended to PYO growers

Hinnonmaki Yellow

- A late season, yellow fruited dessert variety with a distinctive aromatic flavour and vigorous spreading habit. Picking time mid-July and resistant to Mildew

CAC 2yr Bushes	Price £/100
Invicta, Captivator, Hinnonmaki Yellow & Hinnonmaki Red	325
Pax 2L Pots	650
Xenia 2L Pots	575

All bare root bushes will incur cold-store charges of £14.50/1000 from 1st February

blueberries

Early Season

Spartan

- This early season blueberry produces large, light blue berries with a sweet aroma
- An attractive plant due to its white flowers in the spring and its red toned foliage in the autumn
- This upright and robust variety can reach a maximum height of 2 metres and has a moderate growing habit

Duke

- A leading early season variety known for its high yields and quality with uniform shaped berries
- It has a mild flavour that improves with cold storage
- Plant vigour depends on a quality growing site and good cultural practices

Mid Season

Bluecrop

- This easy picking variety produces high yields of large rich flavoured berries
- Its winter hardiness and good disease resistance ensures a reliable crop
- Perfect for being grown in a large pot with its upright compact habit

Bluegold

- This mid season blueberry is a delicious variety that produces sweet berries with a firm texture
- The berries are a deep blue colour and are evenly sized. A self-fertile variety with a good shelf-life

Mid-Late Season

Chandler

- Producing large berries this variety is believed to be the world's largest blueberry
- The berries have a sweet flavour and can weigh up to 2gm and measure 20mm
- Long ripening season over 6 weeks from the beginning of August until mid September

Late Season

Brigitta

- Large light blue fruits which have a crisp texture ideal for eating fresh or freezing
- An upright bush with a vigorous habit which will crop from the end of August
- This variety requires a pollinator as it is not reliably self-fertile

CAC Grade 2L pots: £780/100

rhubarb

Our crowns are grown in Norfolk and are the most effective and reliable way of establishing a productive plant

Early Season

Timperley Early

The earliest variety available producing an early outdoor crop in February and March. Timperley Early stalks are red at the base grading to green at the top and maintain a good thickness and length throughout the season. Early planting is essential, before the end of January if possible.

Uncertified Crowns: £196/100

Fultons Strawberry Surprise

Voted the best flavoured variety in RHS Wisley Trials and awarded an RHS Award Garden Merit. This attractively named variety produces uniform, vivid red stalks on a vigorous plant. Also available as a 2 litre potted plant.

Uncertified Crowns: £332/100

Mid Season

Victoria

Victoria is the highest yielding variety available and produces long, very thick, cardinal-red stalks. The variety establishes reliably in a wide range of growing environments and is very easy to grow successfully. Flavour is outstanding and the variety is well suited to a wide range of culinary uses.

Uncertified Crowns: £196/100

Specialist Variety

Goliath

A vigorous heavy cropping late season variety. The nicely coloured heavy stalks have an excellent flavour and good culinary characteristics. Goliath was highly rated at an RHS taste test and yields in excess of 5kg per crown when grown in a well fertilised open site.

Uncertified Crowns: £196/100

All rhubarb crowns will incur cold-store charges of £14.50/1000 from 1st February.

asparagus

All our crowns are large, one year old, certified crowns produced by specialist growers with the benefit of continental growing conditions and with typical average weights of 75gms per crown. Crowns ensure: more reliable establishment, easier weed control, earlier cropping and higher yield years 1-3

Early Season

Aspalim F1 EU 48104

This is a very early selection with a very high yield potential. The spears are large and uniform with very tight tips. Plant on well-drained soils at a density of 4 to 4.5 crowns per metre and a planting depth of 15 to 22cm.

Gijnlim F1

A very early season, high yielding, all male clonal hybrid. This selection has tightly closed tips and produces the bulk of its crop in the 16 to 24mm range. Gijnlim has a good tolerance to both stem Stemphyllium and Puccinia. Recommended for direct farm sales.

Portlim F1 EU 42399

Outstanding large spears with tight tips, even in the warmest weather, is the characteristic of this variety. Portlim performs best on fertile, well drained soils. When planted at a density of four crowns per metre, it has a long productive life.

Erasmus F1 EU 489088

The first all-male purple asparagus. Thick spears, with an intense purple colour and excellent flavour mark this variety as the best purple variety available. Plant this high yielding variety at a density of 5 to 6 crowns per metre.

NAKT select plant certified crowns	Price £/1000
Aspalim, Portlim, Erasmus & Javelim	725
Gijnlim & Backlim	655
Guelph Millennium	590

Mid Season

Javelim F1 EU 54814

A visually attractive variety due to its well closed tips and smooth spears. Javelim is an all male variety which produces a high percentage of Class 1 and a good yield which remains constant during its production life.

Late Season

Backlim F1

A late season all male hybrid that performs well in the second half of the season and combines well with either Aspalim or Gijnlim. Over 50% of the Spears are in the 20 to 28mm range. Flavour is excellent.

Guelph Millennium F1

An all male, late season variety producing heavy yields of high-quality spears over a comparatively short harvest period. Tip quality remains excellent at greater spear heights than standard varieties making it adapted to the hotter conditions late in the asparagus season.

specialist nursery products

We have brought together a unique selection of plants that offer, above all else, superb flavour and will have particular appeal to the gardener and lover of fine food.

Glen Coe - Purple Raspberry

The result of a cross between a black raspberry and Glen Prosen, this variety produces deep rich purple fruits with a superb flavour and makes superb jams, sauces and wine. Glen Coe is a vigorous mid-season variety producing a moderate number of spine-free canes from each plant. Cut out the old fruiting canes each winter and this perennial plant will crop well for many years.

CAC: 9cm Pots: £350/100 | 2L Pots: £565/100

Charlemagne - Horseradish

A superior named variety of horseradish. Very fast growing, giving a good harvest of mildly flavoured rhizomes in the year of planting. Suitable for any soil type and thrives in partial shade. Produce your own superior 'horseradish sauce' any month of the year. This cruciferous plant has long been valued for its health giving medicinal benefits.

2L Pots: £450/100

Haidegg 17 - Elderberry

A specially selected Austrian variety of Elderberry producing very high yields of flowers, (ideal for Elderberry presse etc) and high yields of large, richly flavoured berries which ripen in September. This is the best commercial variety available and an interesting and flavoursome addition to any large garden.

2L Pots: £450/100

Jerusalem - Artichoke

This member of the sunflower family is grown and prized as a root vegetable. The cylindrical tubes are typically 7 to 10 m long and are rich in carbohydrate, particularly inulin, which gives the cooked vegetable a nutty flavour. Jerusalem artichoke is a perennial that thrives on any soil, however poor, and produces an attractive stand of plants 1.5 - 3m high and successive crops of tubers.

Approved Health: £3.95/kg

Tavor - Globe Artichoke

Tavor produces large, tightly formed, artichokes with an attractive purple tip. Our plants are grown from micropropogated stock, as opposed to seed, which ensures that every plant is identical and true to type. The vigorous 3 foot plant carries only minimal spines and, uniquely, crops in the first year of establishment.

2L Pots: £450/100

2 litre potted plants

We have extended our range of 2 litre potted plants to bring you some exciting NEW varieties. These 2 year old pots are strongly recommended to ensure 100% establishment and rapid growth that is critical to the initial success of plantation.

Plant Delivery

Let us know when you are ready - we will not send plants without prior notice from you. Transport is arranged to your requirements. We can use our vehicles, a contract carrier, or another service of your choice. Collection can also be made from Ivy Farm at a mutually convenient time. Please check your consignment carefully before signing to confirm that they have been 'received in good condition' otherwise we have no claim on our hauliers insurance if goods are damaged or delayed. If you have any problems with your plants, please contact us immediately.

Pallet Rates

The majority of our customers' plants are despatched using the efficient next-day pallet delivery service provided by Palletline. As an approximate guide we can despatch 10,000 strawberry plants or 3,000 canes on each pallet using pallet boxes and can deliver to the whole of England except Cumbria, Cornwall and Devon for approximately £70 per pallet.

Pricing Strategy

The prices listed in this catalogue apply to quantities of 250 or more per variety of strawberry, 50 or more per variety of raspberry, asparagus and rhubarb, 30 or more per variety of ribes and 5 or more per variety of blackberry and blueberry. We are pleased to supply smaller quantities but need to charge an additional 50% above the catalogue price to cover the additional handling and packaging costs. Orders of £50 or less are covered by our "Small Quantities" price list which is available on request.

Genetically Modified Crops

We can confirm, in accordance with the requirements of EU Directive 1829-1830/2003, that the plants supplied by R W Walpole Ltd have not been developed using genetic modification techniques.

Terms and Conditions

All plants are covered by our Terms and Conditions, a copy of which is available on our website - www.rwwalpole.co.uk. All order confirmations will include a full copy of these Terms and Conditions.
